

MANAGEMENT DISCUSSION AND ANALYSIS

Global Economic Environment

The global macroeconomic landscape became increasingly challenging in early 2026 following the escalation of the conflict in the Middle East. Disruptions to energy supplies and key trade routes led to increased volatility in energy prices, freight rates and logistics costs. The sharp increase in memory prices was a global, industry-wide macro trend, driven by supply rationalisation, capacity constraints and strong demand from AI/data centres, rather than company-specific factors.

According to the International Monetary Fund (IMF) in its July 2026 World Economic Outlook (WEO) Update, global GDP growth is projected to slow down to 3.0% in 2026, before recovering to 3.4% in 2027. Although risks to the outlook have become more balanced compared with early 2026, uncertainty continues to remain elevated. Any renewed geopolitical escalation, commodity price volatility, financial market repricing or persistent inflationary pressures could weigh on global economic growth.

Global Electronics Industry

The electronics industry comprises the design, manufacture and sale of electronic equipment and components. It supports a wide range of sectors, including consumer electronics, automotive, telecommunications, healthcare, aerospace and industrial automation. The global electronics market is undergoing a dynamic transformation, driven by rapid technological advancements and evolving consumer expectations. From the rise of AI and smart devices to a growing emphasis on sustainability, the industry continues to innovate to meet changing market demands. Valued at around US\$ 2.3-2.4 Trillion in CY 2025, the global electronics industry is projected to reach US\$ 4.4-4.5 Trillion by CY 2035, growing at a CAGR of 6.2% over the period. While the opportunities are significant, the sector also faces challenges arising from supply chain complexities and an evolving regulatory landscape. Even so, the electronics industry remains one of the fastest-growing and most dynamic sectors globally.

Geographically, the Asia-Pacific region accounts for the largest share of the global electronics market, driven by its strong manufacturing ecosystem and robust consumer demand, followed by regions such as North America and Europe. Within this region, India is emerging as an important manufacturing destination, alongside established hubs such as China. As global brands diversify their supply chains, India's scale, skilled workforce and improving infrastructure are strengthening its role in the global electronics value chain.

Indian Economic Environment

Amid an uncertain global economic environment, India continued to be the world's fastest-growing major economy during 2025-26, supported by strong domestic demand, sustained public capital expenditure and a gradual recovery in private investment. As per the revised national accounts series with 2022-23 as the base year, the country's real GDP is estimated to have expanded by 7.7%, while real Gross Value Added (GVA) grew by 7.9%.

India Real GDP Growth Trend (%)

E: Estimated; P: Projected

Source: MoSPI, RBI

India also remained among the leading global destinations for greenfield investments supported by policy stability, digital governance advancements, a growing skilled workforce and its emergence as a cost-competitive manufacturing hub.

Looking ahead, India's economic fundamentals remain favourable, although the outlook continues to be influenced by external uncertainties. Geopolitical

developments, volatile energy prices and potential disruptions to global trade and supply chains remain key risks over the near to medium term. Nevertheless, resilient consumption, sustained infrastructure development, ongoing policy reforms and continued technology adoption are expected to support economic activity, while imported inflation, global trade uncertainty and weather-related risks could create supply-side pressures.

Indian Electronics Industry

India has emerged as one of the fastest-growing electronics manufacturing destinations globally, supported by strong policy initiatives, expanding domestic demand and increasing integration into global value chains. Since 2019, the country has witnessed one of the most rapid capacity build-outs in the electronics sector. The programme has attracted significant investments from both domestic conglomerates and global manufacturers, accelerating the expansion of the country's manufacturing ecosystem.

The sector has recorded sixfold growth over the past decade in 2024-25, with mobile phones, consumer

and industrial electronics, auto electronics, and electronic components serving as the principal growth segments. Independent market estimates place the size of India's electronics manufacturing market at around US\$130 Billion in 2025, with projections of growth to approximately US\$415 Billion by 2030 and continued strong double-digit momentum through 2035, reflecting the scale of opportunity as India deepens its position in global electronics value chains. This transformation is also visible in India's export basket: mobile phones have moved from being the country's 153rd-largest export item in 2014-15 to its single largest export product in 2025-26, with India now recognised as the world's second-largest mobile phone manufacturer.

Indian Electronics Sector Over Last 5 Years (US\$ Billion)

CAGR (2021-25): Production: 17%; Exports: 31%

Indian Electronics Production (2024-25): Key Sub-Segments

Key Growth Drivers

- Government incentives and regulatory support continue to strengthen the sector through initiatives such as:
 - Production Linked Incentive (PLI) schemes for Large-Scale Electronics Manufacturing, IT Hardware, Telecom, and White Goods, among others
 - Scheme for Promotion of Manufacturing of Electronic Components and Semiconductors (SPECES)
 - Electronics Manufacturing Clusters (EMC 2.0)
 - Indian Semiconductor Mission (ISM)
 - Electronics Components Manufacturing Scheme (ECMS)
- Make in India continues to encourage domestic value addition and import substitution, supported by the reopening of the PLI scheme for white goods and the expansion of component manufacturing initiatives.
- Global OEMs are transitioning from China-centric supply chains towards resilient, multi-node manufacturing networks. Supported by its cost competitiveness, expanding skilled workforce, growing digital adoption and rising electronics exports, India is strengthening its position as a preferred destination for electronics manufacturing and assembly.
- Expanding design and R&D capabilities are strengthening India's competitiveness, while domestic manufacturers continue to enhance their product development capabilities.

Evolving Scope of EMS Capabilities

EMS providers support customers across multiple stages of the product lifecycle, with the breadth of services varying by scale and capabilities. While large EMS companies offer end-to-end solutions spanning product design, component sourcing, manufacturing, testing and after-sales support, smaller and mid-sized players typically focus on manufacturing, assembly and testing services.

Product Design

Conceptualising and designing electronic products to meet customer specifications.

Prototype Development

Building functional prototypes to validate product design and performance before commercial production.

Component Sourcing and Fabrication

Procuring electronic components from qualified suppliers and undertaking fabrication activities.

System Integration

Combining multiple hardware and software components into a fully functional system.

Product Testing

Conducting functional, quality and reliability testing to identify defects and ensure product performance.

Box Build

Integrating printed circuit board assemblies (PCBAs) into enclosures to create finished electronic products.

After-Sales Services

Providing repair, maintenance and remanufacturing services throughout the product lifecycle.

Key Market Restraints

- Supply chain vulnerabilities arising from material shortages, geopolitical uncertainties, logistics disruptions and natural disasters can impact component availability, extend lead times and increase operating costs.
- Regulatory compliance is becoming increasingly complex, with EMS providers required to adhere to diverse safety, labour, environmental and trade regulations across multiple jurisdictions.
- Intellectual property risks remain a key concern as increasing outsourcing requires EMS providers to implement robust legal, cybersecurity and data protection measures.
- Intense market competition continues to exert pricing pressure, as the presence of a large number of EMS providers across geographies limits pricing power and impacts revenue potential.
- Skilled talent availability remains a critical concern, with increasing competition for experienced engineering, R&D, technical and sales professionals contributing to talent shortages and higher attrition.

Key Growth Drivers

- Expansion of connected devices is driving sustained demand for electronics manufacturing, supported by the increasing adoption of smartphones, laptops, wearables and IoT-enabled devices across consumer and industrial applications.
- Electrification and automation across industries such as automotive, energy and manufacturing are accelerating the demand for sophisticated electronic components and systems.
- Increasing outsourcing by OEMs is strengthening the role of EMS providers, as companies seek greater manufacturing flexibility, faster production cycles and lower capital investment while leveraging specialised expertise and economies of scale.
- Advancements in manufacturing technologies are enhancing production efficiency, quality and traceability through the adoption of Industry 4.0 solutions, including automation, artificial intelligence and robotics.
- Rising demand for consumer electronics is increasing reliance on EMS providers for scalable, cost-efficient and high-quality manufacturing of products such as smartphones, wearables and other connected devices.

Global Electronics Manufacturing Services (EMS) Industry

The Electronics Manufacturing Services (EMS) industry has evolved significantly from being primarily focused on contract assembly to becoming an integral part of the global electronics value chain. Today, EMS providers offer end-to-end manufacturing solutions spanning product design, engineering, prototyping, manufacturing, testing, logistics and after-sales support. This evolution has been driven by rapid technological advancements, increasing product complexity, changing consumer expectations, global supply chain diversification and the growing trend of outsourcing by original equipment manufacturers (OEMs).

The global EMS market has witnessed strong growth over the past decade, supported by rising demand across diverse end-use segments, including consumer electronics, computing hardware, telecommunications, automotive electronics and industrial applications. Valued at approximately US\$ 640–650 Billion in 2025, the global EMS market is projected to reach US\$ 1,200–1,250 Billion by 2035, expanding at a CAGR of 6.8% over the period. The industry is expected to continue benefiting from

increasing electronics content across industries, growing demand for high-quality and cost-efficient manufacturing solutions, and ongoing supply chain diversification, positioning EMS providers as strategic partners in the global electronics ecosystem.

Market Value (in US\$ Billion)

CAGR →

Source: <https://assets.kpmg.com/content/dam/kpmgsites/in/pdf/2026/06/indias-electronic-manufacturing-services-ems-opportunity.pdf>

The growth is primarily supported by three key megatrends and segment-specific drivers:

- **Expansion of connected devices:** The proliferation of connected devices from smartphones and laptops to IoT-enabled industrial systems continues to drive demand for electronics manufacturing capacity.
- **Electrification and automation:** The increasing electrification of industries such as automotive, energy, and manufacturing has significantly expanded demand for electronic components and systems.
- **Outsourcing by OEMs:** As electronics products become more complex and production cycles accelerate, OEMs are increasingly outsourcing manufacturing to EMS providers to maintain flexibility and reduce capital investment.

While the industry's growth outlook remains positive, the operating environment continues to be influenced by geopolitical developments. The US-Israel-Iran conflict and ongoing security concerns around key maritime trade routes have highlighted the vulnerability of global supply chains. Any disruption across these critical shipping lanes could increase freight costs, extend component lead times and create volatility in the global movement of electronic components, impacting the cost structures and inventory cycles of EMS providers.

Manufacturing activity within the industry remains concentrated across a few key geographies that offer strong manufacturing ecosystems, skilled talent and integrated supply chains, with the Asia-Pacific region accounting for more than half of the global EMS market. While China continues to be the dominant manufacturing hub, countries such as India, Malaysia, Thailand and Vietnam have emerged as important production destinations within the region. In the West, Mexico is also strengthening its position as a preferred manufacturing base, driven by its proximity to the U.S. market.

Global EMS Market by Region, 2025

Source: <https://assets.kpmg.com/content/dam/kpmgsites/in/pdf/2026/06/indias-electronic-manufacturing-services-ems-opportunity.pdf>

Indian EMS Industry

The Electronics Manufacturing Services (EMS) industry has become a key pillar of India's expanding electronics manufacturing ecosystem, driven by rising outsourcing, increasing domestic production and deeper integration into global supply chains. Valued at approximately US\$ 40-45 Billion in 2024-25, the market is projected to surpass US\$ 150 Billion by 2029-30, growing at a CAGR of over 25% during the period.

While mobile phone assembly and consumer electronics continue to anchor the industry, reflecting the success of the PLI scheme in attracting large-scale smartphone manufacturing, the sector is steadily expanding into higher-value segments such as automotive electronics, industrial electronics and telecommunications infrastructure, broadening its growth opportunities and strengthening its role in the global electronics value chain.

Indian EMS Market in 2024-25 and 2029-30

Source: <https://assets.kpmg.com/content/dam/kpmgsites/in/pdf/2026/06/indias-electronic-manufacturing-services-ems-opportunity.pdf>

Key Growth Drivers

- Growing outsourcing by OEMs is increasing reliance on EMS providers as global brands seek greater manufacturing flexibility, faster product cycles and lower capital investment.
- Global supply chain realignment is accelerating the shift towards geographically diversified manufacturing networks, as companies prioritise resilience following the disruptions caused by the COVID-19 pandemic and the global semiconductor shortage. This is creating significant opportunities for India to strengthen its position as a preferred EMS destination.
- Policy-led manufacturing expansion continues to support the sector through initiatives such as Production Linked Incentive (PLI) schemes and the Electronics Component Manufacturing Scheme (ECMS), which incentivises investments in electronic components, sub-assemblies and the supporting supply chain ecosystem, enabling higher domestic value addition and reducing import dependence.
- Advancing design and engineering capabilities are enabling Indian EMS companies to move beyond contract manufacturing by expanding their Original Design Manufacturing (ODM) and Joint Design Manufacturing (JDM) capabilities across select product categories.
- The transition towards higher-value manufacturing is creating opportunities across product design, new product introduction (NPI), systems integration and advanced manufacturing services, enabling EMS providers to capture a greater share of the electronics value chain.

Business Performance Review

2025-26 was a year of strong financial performance and significant strategic progress for us, despite an increasingly challenging external environment. We delivered consolidated revenue¹ of ₹48,893 Crores (excluding exceptional gain), up 26% YoY, while EBITDA¹ excluding exceptional gain increased 23% to ₹1,887 Crores and PAT excluding exceptional gain increased 20% to ₹845 Crores. Importantly, we maintained strong financial and operating discipline, with ROCE² of 44.8%, ROE of 28.1% and a negative working-capital cycle³ of 8 days, reflecting healthy capital efficiency, strong cash-flow generation and balance-sheet discipline.

At the same time, the year was marked by several external headwinds. The electronics industry experienced significant inflation in key components, particularly memory chips and semiconductor-linked inputs, driven in part by AI and data-centre demand, which led to supply constraints and higher input costs for traditional consumer electronics. The latter part of the year was also impacted by geopolitical tensions, supply-chain and freight disruptions, energy and commodity-price volatility, currency movements, softer consumer demand and inventory rationalisation by brands, with smartphones and IT Hardware being particularly affected. These factors resulted in a more cautious procurement

environment among customers and moderated growth in some of our businesses.

Despite these near-term challenges, we remained focused on strengthening customer partnerships, expanding capacities, improving operational efficiency and accelerating our backward integration and localisation strategy. We continued to invest in critical components such as camera modules, display modules and optical transceivers, while expanding our manufacturing footprint across Mobile, Telecom, IT Hardware, Home Appliances and other segments. We also continued to invest in talent and capability enhancement, with the objective of strengthening our competitive positioning and increasing the value addition captured within India.

Overall, we believe the underlying fundamentals of our business remain strong, and our low leverage, healthy return ratios, negative working-capital cycle and strong balance sheet provide us with the flexibility to invest through the cycle. We remain confident in the long-term India electronics manufacturing opportunity, supported by global supply-chain diversification, increasing localisation, supportive government policies and PLI/ECMS-led investments, and believe these structural factors provide Dixon with a strong multi-year runway for sustainable and profitable growth.

¹ Revenue & EBITDA include other income

² Adjusted ROCE (Excluding Exceptional Item)

³ Working capital days calculated on a quarterly basis

Mobile Phones & Other EMS

Mobile remains our largest and most important business and continues to be a significant growth driver for the company. We have built a very strong position in mobile manufacturing in India, supported by our scale, manufacturing capabilities, customer relationships and execution track record. We continue to see strong structural growth in the Indian smartphone manufacturing ecosystem, although the industry has also experienced some short-term volatility.

The smartphone industry, however, experienced increasing pressure during the second half of the year as it was affected by the normal post-festive slowdown, elevated channel inventories, rupee depreciation, affordability pressures, increasing memory-chip prices and geopolitical situation disruptions, marking a rise in input costs. Globally, AI and data-centre demand resulted in memory manufacturers reallocating DRAM and NAND capacity towards AI-related applications, creating supply constraints for conventional smartphones and PCs. By the end of the year supply-demand situation had started to become more balanced and customer ordering patterns were showing signs of improvement.

Despite these challenges, we continued to strengthen our Mobile Phones platform, diversify our customer and market exposure and expect to see a significant increase in volumes, supported by the exports of feature phones and smartphones, particularly for the African market. We are continuing to expand our Mobile Phone manufacturing footprint. Our 1 Million sq. ft. Noida facility is being developed for an anchor customer and will provide significant additional capacity. In addition, we continue to engage with global smartphone ODMs for further manufacturing opportunities. These investments will help us increase our scale, diversify our customer base and strengthen our position in the global smartphone manufacturing ecosystem.

Telecom & Networking

Telecom and Networking has emerged as one of the highest growth vertical. We are benefiting from the structural growth in home broadband, network infrastructure, CPE devices, IPTV and 5G Fixed Wireless Access.

We have strong relationships with anchor customers and continue to see a healthy order pipeline. At the same time, we are moving into more complex and higher-value products. We have commenced manufacturing of highly complex telecom backhaul microwave radios for a US telecom customer. These products provide an opportunity to serve both the Indian and global markets.

We are also developing capabilities in optical transceivers, for which we have received ECMS support, with manufacturing planned in India. Alongside this, we are localising plastic mouldings, adapters, sheet-metal components and other mechanical parts. Our objective is to localise a higher proportion of the BOM, which will improve supply-chain resilience, cost competitiveness and value addition.

We have also entered into a Joint Design & Manufacturing model with a key customer. This is strategically important because it moves us beyond traditional EMS towards design-led and solution-centric partnerships. We see Telecom as a multi-year growth opportunity and believe it can become one of the largest contributors to our business after Mobile.

IT Hardware

We are at an inflection point in our IT hardware business and are poised to capture a significant share of the Indian IT hardware market. We have successfully established mass production of laptops and AIOs for customers at our Chennai facility.

Our 60:40 JV with Inventec is important for the long-term development of this business. Inventec is one of the world's leading PC ODMs, and this partnership gives us access to significant technology and manufacturing expertise. It will facilitate our foray into servers, while accelerating backward integration into SSD modules and opening opportunities in mechanicals and power supplies at our new facility being developed adjacent to our existing Chennai facility.

With strong customer relationships, significant order visibility, government support for domestic manufacturing and increasing localisation, we believe IT Hardware can become a meaningful pillar of our overall portfolio over the next few years.

Home Appliances

Our Home Appliances business is evolving into a diversified and scalable growth platform, supported by strong customer relationships, expanding manufacturing capabilities and increasing ODM content

We have introduced 16 kg and 18 kg semi-automatic washing machines, which are among the highest-capacity products in the industry. We are also expanding our capabilities in fully automatic and front-load washing machines. Our Tirupati expansion will increase our annual capacity from approximately 0.6 Million units to 0.9 Million units.

We have also entered the robotic Vacuum-Cleaner category through our relationship with Eureka Forbes, where production has commenced and we have a healthy order book. We are venturing into new categories such as dishwashers, microwaves and kitchen chimneys.

Our capabilities are increasingly moving towards ODM. We are providing customers with design support, testing, manufacturing, customisation and other value-added services. At the same time, we are increasing localisation of critical components and investing in automation and industrial engineering. This should help us improve productivity, cost efficiency, asset utilisation and margins while strengthening our relationships with customers.

Consumer Electronics

LED TV

Our focus has increasingly shifted towards technology-led manufacturing and ODM capabilities rather than being limited to conventional EMS. The majority of our TV volumes are now ODM-based, and we continue to add new customers.

We have developed capabilities across multiple operating system platforms, including Google TV, TIZEN, Fire TV, Web OS and Linux. This gives us the ability to cater to a broad customer base with different technology requirements. We have also introduced differentiated features such as in-built Karaoke and Remote Finder.

We have invested in a state-of-the-art CKD robotic LCM line for large-size IFPDs and signage and continue to build capabilities in industrial & institutional displays. We have also entered the premium television segment with Mini-LED TVs, and we are looking at developing this business further through an ODM model. In addition, we are introducing soundbars to complement our television portfolio.

However, we remain focused on the long-term opportunity. Our strategy is to move towards larger screens, smart and connected TVs, premium products and differentiated technology, while simultaneously improving cost efficiency, quality and speed of execution.

Refrigerators

Refrigerators have become an important new growth opportunity for us. Within a short span of time, we have captured a good share of the market and increased our annual capacity from approximately 1.2 Million to 2 Million units.

We are expanding our product portfolio beyond direct-cool refrigerators. We now have capabilities across mini bars, deep freezers, Visi coolers, two-door refrigerators and side-by-side refrigerators. Our 50-litre and 100-litre mini bars have received a strong response, and capacity has been fully booked. In addition, we have developed a 170-litre low-cost refrigerator for export markets, which has received encouraging traction.

During the year, the industry has been impacted by the transition to revised BEE and energy-efficiency norms, which has temporarily affected procurement and inventory patterns. We are using this period to further strengthen our manufacturing platform. We are expanding our refrigerator facility by approximately 375,000 sq. ft., which will allow us to manufacture a wider range of products, including two-door refrigerators, deep freezers, Visi coolers and side-by-side refrigerators.

Our objective is to increase our wallet share with existing customers and progressively move towards higher-value cooling products

Lighting

During the year, we transferred our Lighting business into our 50:50 JV with Signify, which has given us a strong platform in the lighting industry. The partnership combines Signify's technology and product expertise with our manufacturing scale and execution capabilities.

We have strengthened our market position in LED bulbs, battens and downlighters and are progressively moving into premium indoor and professional lighting products. Our portfolio now includes products such as 2x2 panel lights, T LEDs, mirror lights, strip lights, luminaires and other professional lighting solutions.

We believe the Indian lighting industry is going through a period of consolidation. Smaller players are increasingly finding it difficult to make the necessary investments in technology, quality and compliance. We see this as an opportunity for a well-capitalised and integrated platform such as ours to gain market share.

Exports are another important opportunity. We have received orders from major US and European retail chains and are exploring additional opportunities across international markets. We are also investing in automation and localisation to improve productivity and margins.

Wearables & Hearables

This business continues to have a healthy operating profile, with strong margins, good ROCE and a healthy order book. The business operates through our 50:50 JV with Imagine Marketing and has established a strong manufacturing platform.

We are expanding beyond traditional hearables and wearables into adjacent categories such as smartwatches, dash cams, power banks and other accessories. This broader portfolio allows us to leverage our existing manufacturing capabilities, improve capacity utilisation and create operating leverage.

AC-PCB

Our Rexam - Dixon JV remains an important strategic component business. The JV has demonstrated healthy margins, strong ROCE and good cash flow generation, supported by a stable long-term relationship with its anchor customer.

We are establishing a new manufacturing facility in Chennai to support increased customer requirements. The facility is strategically located close to the anchor customer and will provide additional capacity while strengthening the overall partnership. We see this business as an important part of our broader component and backward-integration strategy.

Display & Camera Modules

Displays

In our display business, we are developing manufacturing capabilities for smartphones, notebooks, LED TVs and automotive displays.

We have received ECMS approvals, and the facility construction has been completed with machinery installation underway and mass production will kick start during 2026-27. We are also seeing encouraging interest from major automotive players. This gives us confidence that the opportunity in displays will extend beyond smartphones and notebooks.

For us, the display business is strategically important because it helps us capture more value within the electronics manufacturing chain. It also supports our broader objective of increasing localisation, reducing import dependence and developing a stronger domestic component ecosystem.

Camera Modules

Our camera modules business is an important part of our backward integration strategy, particularly within the Mobile & EMS segment. Through our 51% acquisition of Q-Tech India, we have established capabilities in camera and fingerprint modules, allowing us to move beyond handset assembly and capture a greater share of the electronics value chain. Also, we have received ECMS approvals for the same.

We are significantly scaling our camera-module manufacturing capacity, with the objective of increasing annual capacity from approximately 70 Million units to 180-190 Million units. A substantial portion of this capacity is expected to support our captive smartphone requirements, providing us with greater control over the supply chain, improved localisation and higher value addition.

The business also has applications beyond smartphones, including IoT and automotive, which provide scope for further diversification over time. With camera modules being a critical component in smartphones and increasing localisation being a key priority for the Indian electronics ecosystem, we see this as a strategically important business that can strengthen our manufacturing capabilities, deepen customer relationships and enhance the overall value proposition of Dixon.

Overall Outlook

Our overall strategy is to continue growing while remaining disciplined on capital allocation, working capital and returns. We are conscious that the electronics industry can be cyclical and that there will be periods of commodity inflation, memory price increases, geopolitical uncertainty, inventory corrections and softer consumer demand. However, we believe these short-term challenges do not change the long-term structural opportunity for electronics manufacturing in India.

The global supply-chain diversification opportunity, increasing localisation, government support through PLI and ECMS, India's growing electronics consumption and the increasing willingness of global companies to manufacture in India provide a strong multi-year growth runway.

Our approach is therefore not simply to pursue scale. We want to build profitable, sustainable and capital-efficient scale. We are investing in capacity, but at the same time we are investing in components, technology, automation, localisation, design capabilities and talent. We are also diversifying our customer and product base so that the company becomes more resilient over time.

The journey we are undertaking can broadly be described as:

Our ambition is to build Dixon into a globally competitive, diversified and integrated electronics manufacturing company, with multiple growth engines and a much larger share of value addition within the electronics ecosystem.

Opportunities

Component Manufacturing and Value Addition under PLI and ECMS

India's continued policy focus on strengthening electronics manufacturing through the Production Linked Incentive (PLI) schemes and the recently notified Electronics Component Manufacturing Scheme (ECMS) presents a significant opportunity to accelerate backward integration across the electronics value chain. This policy push is encouraging localised manufacturing of key components like display modules, camera modules, mechanical parts, precision components and sub-assemblies, reducing import dependency, improving supply chain resilience and enhancing margins through higher domestic value addition.

Export-Led Growth and China+1 Realignment

Global OEMs continue to diversify manufacturing footprints under the China+1 strategy. As companies expand production beyond China, India has increasingly emerged as a preferred destination for large-scale electronics production, particularly in smartphones and IT hardware. This shift is reflected in India's rising electronics exports, with mobile phones becoming one of the country's top export categories in recent years. This expanding export base strengthens India's role in global electronics supply chains and improves revenue visibility for large-scale EMS manufacturers.

Premiumisation and AI-Enabled Devices

Rising disposable incomes, growing digital adoption and aspirational consumption trends continue to drive premiumisation across smartphones, televisions, wearables and home appliances. As consumers shift towards high-specification devices, the integration of AI features into smartphones, PCs, wearables and smart appliances is accelerating hardware refresh cycles. AI-enabled edge devices, expanding 5G adoption and smart ecosystem products are further increasing device complexity and broadening the addressable manufacturing opportunity for EMS players. This shift favours manufacturers with strong technological capabilities, robust quality systems and scalable manufacturing infrastructure.

Faster Replacement Cycles and Technology Upgrades

Rapid innovation cycles across smartphones, IT hardware, telecom equipment and consumer durables are shortening product lifecycles, leading to more frequent model launches, greater feature differentiation and continuous upgrades in device specifications. These developments accelerate consumer replacement cycles and drive manufacturing demand consistently, particularly in large-scale mobile and electronics assembly.

Threats

Global Competition and Margin Pressure

The EMS industry operates on structurally thin margins and intense global competition. In this environment, established global players benefit from deep supplier ecosystems, automation advantages and multi-geography manufacturing scale, particularly across China and Southeast Asia. As India's electronics manufacturing ecosystem continues to scale, maintaining cost competitiveness while investing in backward integration, automation and technology upgrades becomes increasingly critical. Consequently, competitive pricing pressure and customer negotiations may impact margin stability.

Supply Chain Vulnerability

India's electronics manufacturing ecosystem continues to rely on imports for key components such as semiconductors, display panels and advanced modules. This structural dependence exposes manufacturers to external supply disruptions, including geopolitical tensions, export restrictions, semiconductor shortages and freight volatility. Such disruptions can affect component availability, delay production timelines and increase procurement costs, thereby impacting working capital cycles and overall cost structures.

Demand Volatility and Customer Concentration

Electronics demand remains closely linked to global macroeconomic conditions and consumer sentiment, making order flows sensitive to demand cycles across key markets. Any slowdown in electronics demand may therefore affect order volumes and capacity utilisation for EMS manufacturers. In addition, EMS business models often involve high customer concentration with large OEM partners. Changes in sourcing strategies, product transitions or volume adjustments by key customers may influence revenue visibility and production planning.

Risk Management

The electronics manufacturing industry operates in a volatile and rapidly evolving environment characterised by technological shifts, supply chain uncertainties and changing market conditions.

To navigate this landscape, risk assessments are undertaken periodically at business-unit levels and consolidated at the enterprise level, ensuring that evolving developments are reviewed in a timely and coordinated manner.

Within this process, additional risk areas such as customer concentration, supplier dependency and other key areas are continuously monitored through defined oversight mechanisms. The insights derived from these assessments inform strategic planning and operational decision-making, strengthening organisational resilience and supporting sustainable value creation.

For further details, please refer to the 'Risk Management' section on page no. 120 of the Integrated Annual Report.

Human Resources

People are the strength behind Dixon Technologies' progress, shaping its culture and pursuit of excellence. With this belief at the core, the Company fosters a respectful, inclusive and performance-driven workplace and maintains a zero-tolerance policy towards discrimination, harassment or any form of inappropriate conduct.

This commitment is reinforced through clearly defined policies, confidential reporting channels and regular awareness and training programmes that enable employees to raise concerns without fear of retaliation while promoting a supportive working environment.

Implementation and oversight of these measures are led by the Human Resources department, supported by dedicated committees such as the Grievance Redressal Committee and the Prevention of Sexual Harassment (POSH) Committee to ensure fair and timely resolution of employee concerns.

As of 2025-26, the Company's workforce comprised 4,383 employees (on a permanent, contractual and standalone basis), reflecting the scale and diversity of its operations.

Internal Control Systems

Dixon Technologies has established an extensive internal control framework to ensure the accuracy of financial reporting, safeguard assets and maintain operational effectiveness across all business segments. The framework is reviewed periodically to keep pace with the Company's expanding scale and operational complexity.

The internal control framework is supported by clearly defined Standard Operating Procedures (SOPs), automation-led workflows and IT-enabled monitoring systems that strengthen transparency, accountability and compliance across processes. Independent internal audits are conducted at regular intervals, and observations are reviewed by the Audit Committee to ensure timely corrective action and continuous improvement, reinforcing the Company's commitment to strong governance standards and disciplined operations.

Cautionary Statement

The Management Discussion and Analysis (MD&A) may contain forward-looking statements that reflect the Company's current expectations regarding future events, business prospects and financial performance. These statements are subject to known and unknown risks, uncertainties and other factors that may cause actual outcomes to differ materially from those expressed or implied.

The assumptions underlying these statements are based on information presently available and are subject to change in light of evolving internal and external conditions. Forward-looking statements speak only as of the date of this report, and the Company undertakes no obligation to update them to reflect subsequent events or developments.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS

1 CORPORATE INFORMATION

The Dixon Technologies (India) Limited ('the Company' or 'the Holding Company') is a Company incorporated in India, with its registered office situated at B-14 & 15, Phase-II, Noida, Gautam Buddha Nagar, Uttar Pradesh, India- 201305. The Company's CIN is L32101UP1993PLC066581. It was incorporated in 1993 under the provisions of the Companies Act, 1956.

The Equity Shares of the Company are listed on BSE Limited and the National Stock Exchange of India Limited.

The Group is primarily involved in manufacturing of electronic goods such as consumer durables, home appliances, laptops, mobile phones, refrigerator, telecom products and others.

The board of directors of the Holding Company approved the financial statement for the year ended 31st March, 2026 and authorised for issue on 12th May, 2026.

2 STATEMENT OF COMPLIANCE AND GOING CONCERN ASSUMPTIONS

These consolidated financial statements are prepared and presented in accordance with the Indian Accounting Standards ('Ind AS') notified under the Companies (Indian Accounting Standards) Rules, 2015, as amended from time to time as notified under section 133 of Companies Act, 2013, the relevant provisions of the Companies Act, 2013 ("the Act") and the guidelines issued by the Securities and Exchange Board of India (SEBI), as applicable. The accounting policies have been consistently applied for all the periods presented in the consolidated financial statements except where a newly issued accounting standard is initially adopted or a revision to an existing accounting standard requires a change in the accounting policy hitherto in use.

3 BASIS OF PREPARATION OF CONSOLIDATED FINANCIAL STATEMENTS

The consolidated financial statements have been prepared on a historical cost basis, except for

- Derivative Financial Instruments at fair value;
- Certain financial assets and liabilities at fair value (refer to accounting policy regarding financial instruments);
- Employee's defined benefit plan measured as per actuarial valuation;

- Employee stock option plans measured at fair value;

All assets and liabilities have been classified as current and non-current as per Group's normal operating cycle. Based on nature of operations, the Group has considered an operating cycle of 12 months.

The consolidated financial statements are presented in Indian Rupee/₹, which is the functional currency of the Group and all values are rounded to the nearest Lakhs (₹ /00000), except when otherwise indicated.

4 BASIS OF CONSOLIDATION

The consolidated financial statements comprise the financial statements of the Group and entities controlled by the Group and its subsidiaries. Control is achieved when the Group:

- i. Has power over the investee
- ii. Has exposure or rights to variable return from its involvement with the investee, and
- iii. Has the ability to use its power over the investee to effect the amount of its return.

The Group reassesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the above three elements of control.

When the Group has less than a majority of the voting or similar rights of an investee, the Group considers all relevant facts and circumstances in assessing whether it has power over an investee, including:

- i. Contractual arrangement with the other vote holders of the investee,
- ii. Rights arising from other contractual arrangements,
- iii. The Group's voting rights and potential voting rights,
- iv. Size of the Group's holding of voting rights relative to the size and dispersion of holdings of other investors with voting rights and
- v. Any additional facts and circumstances that indicate that the Group has, or does not have, the current ability to direct the relevant activities at the time that decisions need to be made, including voting patterns at previous shareholders' meetings.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

Consolidation of a subsidiary begins when the Group obtains control over the subsidiary and ceases when the Group loses control over the subsidiary. Assets, liabilities, income and expenses of a subsidiary acquired or disposed of during the year are included in consolidated financial statements from the date the Group gains control until the date the Group ceases to control the subsidiary.

If an entity of the Group uses accounting policies other than those adopted in the consolidated financial statements, for like transactions and other events in similar circumstances appropriate adjustments are made to that entity's financial statements in preparing the consolidated financial statements to ensure conformity with the Group's accounting policies.

The financial statements of all entities used for the purpose of consolidation are drawn up to the same reporting date as that of the Group, i.e., year ended on 31st March, 2026.

Consolidation procedure followed is as under:

- i. Items of assets, liabilities, equity, income, expenses and cash flows of the parent with those of its subsidiaries are combined on a like-for-like basis. For this purpose, income and expenses of the subsidiary are based on the amounts of the assets and liabilities recognised in the consolidated financial statements at the acquisition date
- ii. The difference between carrying amount of the parent's investment in each subsidiary and the parent's portion of equity of each subsidiary is subject to adjustment of goodwill and
- iii. Intragroup assets and liabilities, equity, income, expenses and cash flows relating to transactions between entities of the Group are eliminated subject to impact of deferred taxes. Profit or loss and each component of other comprehensive income (OCI) are attributable to equity holders of the parent of the Group and to the non-controlling interest, even if this results in the non-controlling interests having deficit balance.

A change in the ownership interest of a subsidiary, without loss of control, is accounted for as an equity transaction.

Joint ventures

Joint venture is a joint arrangement whereby the parties that have joint control of the arrangement

have rights to the net assets of the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control. Investments in joint ventures are accounted for using the equity method, after initially being recognised at cost in the consolidated balance sheet.

Equity method

Under the equity method of accounting, the investments are initially recognised at cost and adjusted thereafter to recognise the Group's share of the post-acquisition profits or losses of the investee in statement of profit and loss and the Group's share of other comprehensive income of the investee in other comprehensive income. Dividends received or receivable from joint ventures are recognised as a reduction in the carrying amount of the investment.

When the Group's share of losses in an equity accounted investment equals or exceeds its interest in the entity, including any other unsecured long-term receivables, the Group does not recognise further losses, unless it has incurred obligations or made payments on behalf of the other entity. Such further losses are disclosed as part of current liabilities.

Unrealised gains on transactions between the Group and its joint ventures are eliminated to the extent of the Group's interest in these entities. Unrealised losses are also eliminated unless the transaction provides evidence of an impairment of the asset transferred. Accounting policies of equity accounted investees have been changed where necessary to ensure consistency with the policies adopted by the Group.

5 BUSINESS COMBINATION

The Group accounts for its business combinations under the acquisition method. The consideration transferred in a business combination is measured at fair value, which is calculated as the sum of the acquisition-date fair values of the assets transferred by the Group to the former owners of the acquiree, and equity interests issued by the Group in exchange of control of the acquiree. Acquisition related costs are generally recognised in profit or loss as incurred.

At the acquisition date, the identified assets acquired and the liabilities assumed are recognised at their fair value, except that:

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

- i. Deferred tax assets or liabilities, and assets or liabilities related to employee benefit arrangements are recognised and measured in accordance with Ind AS 12 Income Taxes and Ind AS 19 Employee benefits respectively;
- ii. liabilities or equity instruments related to share-based payment arrangements of the acquiree or share-based payment arrangements of the Group entered into to replace share-based payment arrangements of the acquiree are measured in accordance with Ind AS 102 Share-based Payment at the acquisition date; and
- iii. assets (or disposal groups) that are classified as held for sale in accordance with Ind AS 105 Non-current Assets held for sale and discontinued operations are measured in accordance with that Standard.

Goodwill is measured as the excess of the sum of the consideration transferred, the amount of any non-controlling interests in the acquiree, and the fair value of the acquirer's previously held equity interest in the acquiree (if any) over the net of the acquisition-date amounts of the identified assets acquired and the liabilities assumed.

In case of a bargain purchase, before recognising a gain in respect thereof, the Group determines whether there exists clear evidence of the underlying reasons for classifying the business combination as a bargain purchase. Thereafter, the Group reassesses whether it has correctly identified all of the assets acquired and all of the liabilities that are identified in that reassessment. The Group then reviews the procedures used to measure the amounts that Ind AS requires for the purpose of calculating the bargain purchase. If the gain remains after this reassessment and review, the Group recognises it in Other Comprehensive Income and accumulates the same in equity as capital reserve. This gain is attributable to the acquirer. If there does not exist clear evidence of the underlying assets for classifying the business combination as a bargain purchase, the Group recognises the gain, after reassessing and reviewing (as described above), directly in equity as capital reserve.

Non-controlling interests that are present ownership interests and entitle their holders to a proportionate share of entity's net assets in the event of liquidation may be initially measured either at fair value or at non-controlling interests' proportionate share of

recognised amounts of the acquiree's identified net assets. The choice of measurement basis is made on a transaction-by-transaction basis. Other types of non-controlling interests are measured at fair value or, when applicable, on the basis specified in another Ind AS.

When the consideration transferred by the Group in a business combination includes assets or liabilities resulting from a contingent consideration arrangement, the contingent consideration is measured at its acquisition-date fair value and included as part of the consideration transferred in a business combination. Changes in the fair value of the contingent consideration that qualify as measurement period adjustments are adjusted retrospectively, with corresponding adjustments against goodwill or capital reserve, as the case may be. Measurement period adjustments are adjustments that arise from additional information obtained during the 'measurement period' (which cannot exceed one year from acquisition date) about facts and circumstances that existed at the acquisition date.

The subsequent accounting for changes in the fair value of contingent consideration that do not qualify as measurement period adjustments depends on how the contingent consideration is classified. Contingent consideration that is classified as an asset or a liability is measured at fair value at subsequent reporting dates with the corresponding gain or loss being recognised in profit or loss. Contingent consideration that is classified as equity is not remeasured at subsequent reporting dates and its subsequent settlement is accounted within equity.

When a business combination is achieved in stages, the Group's previously held equity interest in the acquiree is remeasured to its acquisition date fair value, and the resulting gain, if any, is recognised in profit or loss. Amounts arising from interests in the acquiree prior to the acquisition date that have previously been recognised in other comprehensive income are reclassified to profit or loss where such treatment would be appropriate if that interest were disposed off.

If the initial accounting for a business combination is complete by end of the reporting period in which combination occurs, the Group reports provisional amounts for the items for which the accounting is incomplete. Those provisional amounts are adjusted during the measurement period, or additional assets or liabilities are recognised, to reflect new information

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

obtained about facts and circumstances that existed at the acquisition date that, if known, would have affected the amounts recognised at that date.

Goodwill

After initial recognition, goodwill arising on an acquisition of a business is measured at cost as established at the date of acquisition of the business less accumulated impairment losses, if any

For the purposes of impairment testing, goodwill is allocated to each of the Group's cash generating units (or Groups of cash-generating units) that is expected to benefit from the synergies of the combination.

A cash-generating unit to which goodwill has been allocated is tested for impairment annually, or more frequently when there is indication that the unit may be impaired. If the recoverable amount of the cash-generating unit is less than its carrying amount, the impairment loss is allocated first to reduce the carrying amount of any goodwill allocated to the unit and then to the other assets of the unit pro rata based on the carrying amount of each asset in the unit. Any impairment loss for goodwill is recognised directly in the Consolidated Statement of Profit and Loss. An impairment loss recognised for goodwill is not reversed in subsequent periods.

On disposal of the relevant cash-generating unit, the attributable amount of goodwill is included in the determination of the profit or loss on disposal.

The Group discontinues the use of the equity method from the date when the investment ceases to be a joint venture, or when the investment is classified as held for sale.

When a Group entity transacts with a joint venture of the Group, profits and losses resulting from the transactions with the joint venture are recognised in the Group's consolidated financial statements only to the extent of interests in the joint venture that are not related to the Group.

6 USE OF ESTIMATES AND JUDGEMENTS

The preparation of consolidated financial statements in conformity with the recognition and measurement principles of Ind AS requires the management of the Group to make estimates and judgements that affect the reported balances of assets and liabilities, disclosures of contingent liabilities as at the date of consolidated financial statements and the reported amounts of income and expenses for the

periods presented. These estimates involve the use of judgements or assumptions based on the latest available reliable information.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimates are revised and future periods are affected.

The Group uses the following critical accounting judgements, estimates and assumptions in preparation of its consolidated financial statements:

- Determination of useful lives of property, plant and equipment and other intangible assets
- Loss allowance for expected credit losses
- Measurement of defined benefit obligations – Key actuarial assumptions
- Recognition and measurement of provisions and contingencies
- The net realisable value of an item of inventory
- Lease term regarding exercise of extension options
- Recognition of deferred tax assets / liabilities
- Provision for warranty obligations

7 MATERIAL ACCOUNTING POLICIES INFORMATION

7.1 Property, plant and equipment

Property, plant and equipment is stated at acquisition cost net of accumulated depreciation and accumulated impairment losses, if any. Cost of acquisition or construction of property, plant and equipment comprises its purchase price including import duties, non-refundable purchase taxes and any directly attributable cost of bringing the item to its working condition for its intended use after deducting trade discounts and rebates.

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Group and the cost of the item can be measured reliably. All other repairs and maintenance costs are charged to the statement of profit and loss during the period in which they are incurred.

Gains or losses arising on retirement or disposal of property, plant and equipment are recognised in the statement of profit and loss.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

Property, plant and equipment which are not ready for intended use as on the date of Balance Sheet are disclosed as "Capital work-in-progress". Advances paid towards the acquisition of property, plant and equipment outstanding at each balance sheet date are classified as capital advances under "Other Non-Current Assets".

Depreciation and useful life

Depreciation is recognised so as to write off the cost of assets (other than freehold land and properties under construction) less their residual values over their useful lives, using straight-line method as per the useful life as mentioned in Schedule II to the Companies Act, 2013 except in respect of following categories of assets, in whose case the life of the assets has been assessed as under based on technical advice, taking into account the nature of the asset, the estimated usage of the asset, the operating conditions of the asset, past history of replacement, anticipated technological changes, manufacturers warranties and maintenance support, etc

Asset	Useful life
Plant and machinery	2-15 years
Furniture and fixtures	3-10 years
Vehicles	8-10 years
Office equipment	3-7 years
Computers	3-6 years
Building	9-60 years

Freehold land is not depreciated

The Group conducts an annual review of the residual value, useful lives and depreciation method of its assets. If there are differences between the current expectations and previous estimates, the change is accounted for as a prospective change in accounting estimate.

Major overhaul costs are depreciated over the estimated life of the economic benefit derived from the overhaul. If the next overhaul is undertaken earlier than the previously estimated life of the economic benefit, the carrying amount of the remaining previous overhaul cost is charged to the Statement of Profit and Loss.

If an asset's carrying amount exceeds its estimated recoverable amount, the carrying amount is immediately written down to its recoverable amount.

Derecognition

The Group derecognises property, plant and equipment when it is disposed of or when there are no future economic benefits expected from its continued use. The gain or loss resulting from the disposal or retirement of a property, plant and equipment item is calculated as the difference between the sales proceeds and the carrying amount of the asset. This gain or loss is recognised in the Statement of Profit and Loss.

Capital work in progress:

Capital work-in-progress is recorded at its cost, which encompasses expenses incurred during the construction period. This cost also includes interest on the amount borrowed for the acquisition of qualifying assets and other expenses related to project implementation, to the extent that these expenses pertain to the period before the commencement of commercial production.

7.2 Other intangible assets

Other intangible assets with finite useful lives that are acquired separately are carried at cost less accumulated amortisation and accumulated impairment losses. Amortisation is recognised on a straight-line basis over their estimated useful lives. The estimated useful life and amortisation method are reviewed annually and any changes in estimates are applied prospectively. Other intangible assets with indefinite useful lives that are acquired separately are carried at cost less accumulated impairment losses.

The useful lives of other intangible assets are assessed as either finite or indefinite.

Useful life and amortisation

Amortisation is recognised in a straight-line manner over the useful lives of the assets, starting from the date of capitalisation. The useful lives of the assets are determined as follows:

Category	Useful life
Computer software	3-6 years
Customer contract	5 years

The estimated useful life of other intangible assets is reviewed at the end of each reporting period and any changes in estimate are accounted for prospectively.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

Derecognition

Other intangible assets are derecognised on disposal, or when no future economic benefits are expected from use or disposal. Gains or losses arising from derecognition of an other intangible asset are determined as the difference between the net disposal proceeds and the carrying amount.

Intangible assets under development

Intangible assets under development are recorded at their cost, which encompasses expenses related to the development of intangible assets until they are ready for use.

7.3 Impairment of property, plant and equipment and other intangible assets

At the end of each reporting year, the Group assesses whether there are any indications of impairment for its property, plant and equipment and other intangible assets. If there is any indication, the Group estimates the recoverable amount of the asset to determine the extent of impairment loss, if any. If it's not possible to estimate the recoverable amount of an individual asset, the Group estimates the recoverable amount of the cash-generating unit to which the asset belongs. Corporate assets are allocated to individual cash-generating units if a reasonable and consistent allocation basis can be identified.

Intangible assets with indefinite useful lives and intangible assets not yet available for use are tested for impairment at least annually, as well as when there is an indication of impairment. The recoverable amount is determined based on the higher of fair value less costs to sell and value in use. Value in use is assessed by discounting the estimated future cash flows to their present value using a pre-tax discount rate that reflects market assessments of the time value of money and asset-specific risks.

If the recoverable amount of an asset or cash-generating unit is lower than its carrying amount, the carrying amount is reduced to the recoverable amount and an impairment loss is recognised immediately in the Statement of Profit and Loss.

7.4 Inventories

Inventories are valued at the lower of the cost (net of eligible input tax credits) and net realisable value (except waste and scrap which are valued at estimated net realisable value).

Raw materials, stores and spare parts and packing materials are considered to be realisable at cost, if the finished products, in which they will be used, are expected to be sold at or above cost. The cost is computed using the 'First in First Out' method ('FIFO'). Cost includes expenditure incurred for acquiring inventories like purchase price, import duties, taxes (net of tax credit) and other costs incurred in bringing the inventories to their present location and condition.

Cost of finished goods and work in progress includes cost of direct materials and labour and a proportion of manufacturing overheads based on the normal operating capacity but excluding borrowing costs incurred in bringing the inventories to their present location and condition. The cost of finished goods and work-in-progress is computed on FIFO basis.

Net realisable value is the estimated selling price in the ordinary course of business, less estimated costs of completion and the estimated costs necessary to make the sale.

7.5 Government grants

Government Grants are recognised when there is a reasonable assurance that the same will be received and all attached conditions will be complied with. When the grant relates to an expense item, it is recognised in the Statement of Profit and Loss by way of a deduction to the related expense on a systematic basis over the periods that the related costs, for which it is intended to compensate, are expensed.

Incentives received under the Production Linked Incentive (PLI) Schemes notified by the Government of India – including but not limited to PLI for Large Scale Electronics Manufacturing (Mobile Phones), PLI for IT Hardware, PLI for Telecom and Networking Products, PLI for White Goods (Air Conditioners and LED Lights), and (where applicable) the Scheme for Promotion of Manufacturing of Electronic Components and Semi-conductors / Components PLI Scheme – are recognised as 'Other Operating Revenue' in the Statement of Profit and Loss on accrual basis in the period in which the Company becomes eligible to receive the incentive, provided there is reasonable assurance that the underlying conditions (incremental investment thresholds, incremental sales thresholds and product-mix conditions specified in the respective scheme guidelines) have been or will be complied with

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

and the incentive will be received. PLI receivables outstanding at the reporting date are presented under 'Other current financial assets' or 'Other current assets', as appropriate.

Government grants whose primary condition is that the group should purchase, construct or otherwise acquire non-current assets (including property, plant and equipment) are recognised as deferred income in the consolidated statement of financial position and transferred to profit or loss on a systematic and rational basis over the useful lives of the related assets.

7.6 Revenue recognition

Revenue from contracts with customers is recognised at an amount that reflects the consideration to which the Group expects to be entitled in exchange for those goods or services.

Revenue towards satisfaction of a performance obligation is measured at the amount of transaction price (net of variable consideration) allocated to that performance obligation. The transaction price of goods sold and services rendered is net of variable consideration on account of discounts or incentives offered by the Group as part of the contract. This variable consideration is estimated based on the expected value of outflow. Revenue (net of variable consideration) is recognised only to the extent that it is highly probable that the amount will not be subject to significant reversal when uncertainty relating to its recognition is resolved.

Sale of products:

Revenue from the sale of products is recognised when the control of the goods has been transferred to the customer. The performance obligation in case of sale of products is satisfied at a point in time i.e., when the material is shipped to the customer or on delivery to the customer, as may be specified in the contract.

Warranty obligations, return rights, volume rebates, cash discounts and similar variable consideration are estimated at contract inception and treated as a reduction of the transaction price; expected warranty outflows are recognised as a provision.

Sale of services

Revenue from rendering services is recognised over time in the accounting period in which the services are rendered and the Group has an enforceable right to payment for services.

7.7 Leases

The Group assesses whether a contract contains a lease, at the inception of the contract. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. To assess whether a contract conveys the right to control the use of an identified asset, the Group assesses whether:

- the contract involves the use of identified asset;
- the Group has substantially all of the economic benefits from the use of the asset throughout the period of lease and;
- the Group has the right to direct the use of the asset.

As a lessee**i. Right-of-use assets**

The Group recognises right-of-use assets at the commencement date of the lease (i.e., the date the underlying asset is available for use). Right-of-use assets are measured at cost, less any accumulated depreciation and impairment losses, and adjusted for any remeasurement of lease liabilities. The cost of right-of-use assets includes the amount of lease liabilities recognised, initial direct costs incurred and lease payments made at or before the commencement date less any lease incentives received. Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease term and the estimated useful lives of the assets as follows:

- Buildings- 05 to 30 years
- Land- 99 years

The right-of-use assets are also subject to impairment.

ii. Lease liabilities

At the commencement date of the lease, the Group recognises lease liabilities measured at the present value of lease payments to be made over the lease term. The lease payments include fixed payments less any lease incentives receivable, variable lease payments that depend on an index or a rate and amounts expected to be paid under residual value guarantees. The lease payments also include the exercise price of a purchase option reasonably certain

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

to be exercised by the Group and payments of penalties for terminating the lease, if the lease term reflects the Group exercising the option to terminate.

Variable lease payments that do not depend on an index or a rate are recognised as expenses in the period in which the event or condition that triggers the payment occurs.

In calculating the present value of lease payments, the Group uses its incremental borrowing rate at the lease commencement date. After the commencement date, the amount of lease liabilities is increased to reflect the accretion of interest and reduced for the lease payments made. In addition, the carrying amount of lease liabilities is remeasured if there is a modification, a change in the lease term, a change in the lease payments (e.g., changes to future payments resulting from a change in an index or rate used to determine such lease payments) or a change in the assessment of an option to purchase the underlying asset.

iii. Short-term leases and leases of low-value assets

The Group applies the short-term lease recognition exemption to its short-term leases of building and machinery and equipment (i.e., those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). It also applies the lease of low-value assets recognition exemption to leases of building and machinery and equipment that are considered to be low value. Lease payments on short-term leases and leases of low-value assets are recognised as expense on a straight-line basis over the lease term.

7.8 Income taxes

The income tax expense or credit for the period is the tax payable on the current period's taxable income based on the applicable income tax rate adjusted by changes in deferred tax assets and liabilities attributable to temporary differences and to unused tax losses.

Current tax

Current tax is based on taxable profit for the year. The Group's current tax is calculated using tax rates and laws that have been enacted or substantively enacted by the end of the reporting period.

Deferred tax

Deferred tax is recognised on temporary differences between the carrying amounts of assets and liabilities in the Financial Statements and the corresponding tax bases used in the computation of taxable profit. Deferred tax liabilities are generally recognised for all taxable temporary differences. Deferred tax assets are generally recognised for all deductible temporary differences to the extent that it is probable that taxable profits will be available against which those deductible temporary differences can be utilised.

The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are re-assessed at each reporting date and are recognised to the extent that it has become probable that future taxable profits will allow the deferred tax asset to be recovered. Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the year when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted at the reporting date.

Deferred tax relating to items recognised outside profit or loss is recognised outside profit or loss (either in other comprehensive income or in equity). Deferred tax assets and liabilities are offset when there is a legally enforceable right to offset current tax assets and liabilities and when the deferred tax balances relate to the same taxation authority. Current tax assets and tax liabilities are offset where the entity has a legally enforceable right to offset and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

7.9 Borrowing costs

Borrowing cost includes interest expense, amortisation of discounts, hedge related cost incurred in connection with foreign currency borrowings, ancillary costs incurred in connection with borrowing of funds and exchange difference, arising from foreign currency borrowings to the extent they are regarded as an adjustment to the interest cost.

Borrowing costs, that are attributable to the acquisition or construction or production of a qualifying asset, are capitalised as part of the cost of such asset till such time the asset is ready for

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

its intended use. A qualifying asset is an asset that necessarily takes a substantial period of time to get ready for its intended use.

All other borrowing costs are recognised as an expense in the period in which they are incurred.

Investment income earned on the temporary investment of specific borrowings pending their expenditure on qualifying assets is deducted from the borrowing costs eligible for capitalisation.

7.10 Provisions and contingent liabilities

Provisions are recognised when the Group has a present obligation (legal or constructive) as a result of a past event, it is probable that the Group will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation.

Provisions are measured at the best estimate of the consideration required to settle the present obligation at the end of the reporting period, taking into account the risks and uncertainties surrounding the obligation.

If the effect of the time value of money is material, provisions are determined by discounting the expected future cash flows to net present value using an appropriate pre-tax discount rate that reflects current market assessments of the time value of money and where appropriate, the risks specific to the liability.

A present obligation that arises from past events, where it is either not probable that an outflow of resources will be required to settle or a reliable estimate of the amount cannot be made, is disclosed as a contingent liability. Contingent liabilities are also disclosed when there is a possible obligation arising from past events, the existence of which will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the Group.

Claims against the Group, where the possibility of any outflow of resources in settlement is remote, are not disclosed as contingent liabilities.

Contingent assets

Contingent assets are not recognised in the financial statements since this may result in the recognition of income that may not be realised. However, when the realisation of income is virtually certain, then the related asset is not a contingent asset and is recognised.

Warranties provision

Provisions for warranty-related costs are recognised as an expense in the Statement of Profit and Loss when the product is sold or service provided to the customer. Initial recognition is based on historical experience. The initial estimate of warranty-related costs is revised annually.

Onerous contracts

Present obligations arising under onerous contracts are recognised and measured as provisions. An onerous contract is considered to exist where the group has a contract under which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits expected to be received under it.

7.11 Employee benefits

Employee benefits include salaries, wages, contribution to provident fund, gratuity, leave encashment towards un-availed leave, compensated absences and other terminal benefits.

Short-term employee benefits

Employee benefits such as wages, salaries, bonus, ex-gratia, short-term compensated absences, performance linked rewards, including non-monetary benefits that are expected to be settled within 12 months are classified as short-term employee benefits and are recognised in the period in which the employee renders services and are measured at the amounts expected to be paid when the liabilities are settled.

Defined contribution plan

Contribution payable to the recognised provident fund, employee state insurance, employee pension scheme and other employee social security scheme etc., which are substantially defined contribution plans, is recognised as expense based on the undiscounted amount of obligations of the Group to contribute to the plan.

Defined benefit plan

Defined benefit plans comprising gratuity and other terminal benefits, are recognised based on the present value of defined benefit obligations which is computed using the projected unit credit method, with actuarial valuations being carried out at the end of each annual reporting period. These are accounted either as current employee cost or included in cost of assets as permitted.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

The net interest cost is calculated by applying the discount rate to the net balance of the defined benefit obligation. This cost is included in employee benefit expense in the statement of profit and loss.

Remeasurement gains and losses arising from experience adjustments and changes in actuarial assumptions are recognised in the period in which they occur, directly in other comprehensive income.

Changes in the present value of the defined benefit obligation resulting from plan amendments or curtailments are recognised immediately in profit or loss as past service cost.

Other long-term employee benefits

Other long-term employee benefit comprises of leave encashment towards unavailed leave and compensated absences, which is computed using the projected unit credit method, with actuarial valuations being carried out at the end of each annual reporting period. These are accounted either as current employee cost or included in cost of assets as permitted.

Termination benefits:

Termination benefits are payable when employment is terminated by the Group before the normal retirement date, or when an employee accepts voluntary retirement scheme in exchange for these benefits. Expenditure on Voluntary Retirement Scheme (VRS) is charged to the Statement of Profit and Loss when incurred.

7.12 Share-based payments

The Group issues equity-settled share-based payments to certain employees. Equity-settled share-based payments are measured at fair value as at the date of grant. The fair value determined at the grant date of the equity-settled share-based payments is expensed on a straight-line basis over the vesting period, based on the Group's estimate of the shares that will eventually vest with corresponding increase in equity. Fair value of the options on the grant date is calculated considering the following:

- Including the impact of market-based performance conditions (e.g. equity share price of an entity) and non-vesting conditions (e.g. holding the shares for the specific period of time)
- Excluding the impact of service and non-market performance conditions (e.g. achieving revenue or profitability target)

At the end of each period, the entity revises its estimates of the number of options that are expected to vest based on the non-market vesting and service conditions. It recognises the impact of the revision to original estimates, if any, in profit or loss, with a corresponding adjustment to equity. However, fair value of options is not remeasured subsequently.

7.13 Statement of cash flows

Cash flows are reported using the indirect method, whereby the net profit before tax is adjusted for the effects of transactions of a non-cash nature, any deferrals or accruals of past or future operating cash receipts or payments and item of income or expenses associated with investing or financing cash flows. The cash flows from operating, investing and financing activities of the Group are segregated.

7.14 Earnings per share

Basic earnings per share

Basic earnings per share is computed by dividing the net profit after tax by weighted average number of equity shares outstanding during the period. The weighted average number of equity shares outstanding during the year is adjusted for treasury shares, bonus issue, bonus element in a rights issue to existing shareholders, share split and reverse share split (consolidation of shares).

Diluted earnings per share

Diluted earnings per share is computed by dividing the profit after tax after considering the effect of interest and other financing costs or income (net of attributable taxes) associated with dilutive potential equity shares by the weighted average number of equity shares considered for deriving basic earnings per share and also the weighted average number of equity shares that could have been issued upon conversion of all dilutive potential equity shares including the treasury shares held by the Group to satisfy the exercise of the share options by the employees.

7.15 Cash and cash equivalents

Cash and cash equivalents in the Balance Sheet comprise cash at banks and on hand and short-term deposits with an original maturity of three months or less and deposits which are subject to insignificant risk of changes in value.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

7.16 Fair value measurement

The Group measures financial instruments, such as investments (other than equity investments in Subsidiaries, Joint Ventures and Associates) and derivatives at fair values at each Balance Sheet date.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either:

- In the principal market for the asset or liability, or
- In the absence of a principal market, in the most advantageous market for the asset or liability.

The principal or the most advantageous market must be accessible by the Group.

The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use, or by selling it to another market participant that would use the asset in its highest and best use.

The Group uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities (for which fair value is measured or disclosed in the financial statements) are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

Level 1 — Quoted (unadjusted) market prices in active markets for identical assets or liabilities.

Level 2 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable other than quoted prices included in Level 1.

Level 3 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable.

For assets and liabilities that are recognised in the financial statements on a recurring basis, the Group determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.

Management determines the policies and procedures for both recurring fair value measurement, such as derivative instruments and unquoted financial assets measured at fair value and for non-recurring measurement, such as assets held for disposal in discontinued operations.

7.17 Financial Instruments

Initial recognition and subsequent measurement

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

i. Financial assets

Initial recognition and measurement

Financial assets are classified, at initial recognition, as subsequently measured at amortised cost, fair value through other comprehensive income (OCI) and fair value through profit or loss.

The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Group's business model for managing them. With the exception of trade receivables that do not contain a significant financing component or for which the Group has applied the practical expedient, the Group initially measures a financial asset at its fair value plus, in the case of a financial asset not at fair value through profit or loss, transaction costs. Trade receivables that do not contain a significant financing component or for which the Group has applied the practical expedient are measured at the transaction price.

In order for a financial asset to be classified and measured at amortised cost or fair value through OCI, it needs to give rise to cash

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

flows that are 'solely payments of principal and interest (SPPI)' on the principal amount outstanding. This assessment is referred to as the SPPI test and is performed at an instrument level. Financial assets with cash flows that are not SPPI are classified and measured at fair value through profit or loss, irrespective of the business model.

The Group's business model for managing financial assets refers to how it manages its financial assets in order to generate cash flows. The business model determines whether cash flows will result from collecting contractual cash flows, selling the financial assets, or both. Financial assets classified and measured at amortised cost are held within a business model with the objective to hold financial assets in order to collect contractual cash flows while financial assets classified and measured at fair value through OCI are held within a business model with the objective of both holding to collect contractual cash flows and selling.

Subsequent measurement

For purposes of subsequent measurement, financial assets are classified in four categories:

- Financial assets at amortised cost (debt instruments)
- Financial assets at fair value through OCI with recycling of cumulative gains and losses (debt instruments)
- Financial assets designated at fair value through OCI with no recycling of cumulative gains and losses upon derecognition (equity instruments)
- Financial assets at fair value through profit or loss

Financial assets at amortised cost (debt instruments)

Financial assets at amortised cost are subsequently measured using the effective interest (EIR) method and are subject to impairment. Gains and losses are recognised in profit or loss when the asset is derecognised, modified or impaired.

The Group's financial assets at amortised cost include trade receivables, loan to subsidiary, joint ventures and associates and loans to employees.

Financial assets at fair value through profit or loss

Financial assets at fair value through profit or loss are carried in the statement of financial position at fair value with net changes in fair value recognised in the statement of profit or loss.

This category includes derivative instruments and listed equity investments which the Group had not irrevocably elected to classify at fair value through OCI. Dividends on listed equity investments are recognised as other income in the statement of profit or loss when the right of payment has been established.

A derivative embedded in a hybrid contract, with a financial liability or non-financial host, is separated from the host and accounted for as a separate derivative if the economic characteristics and risks are not closely related to the host; a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and the hybrid contract is not measured at fair value through profit or loss. Embedded derivatives are measured at fair value with changes in fair value recognised in profit or loss. Reassessment only occurs if there is either a change in the terms of the contract that significantly modifies the cash flows that would otherwise be required or a reclassification of a financial asset out of the fair value through profit or loss category.

Derecognition

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is primarily derecognised (i.e., removed from the Group's statement of financial position) when:

- The rights to receive cash flows from the asset have expired; or
- The Group has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement and either
 - a. the Group has transferred substantially all the risks and rewards of the asset, or

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

- b. the Group has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset

When the Group has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if and to what extent, it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the Group continues to recognise the transferred asset to the extent of its continuing involvement. In that case, the Group also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Group has retained.

Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that the Group could be required to repay.

Impairment

The Group recognises an allowance for expected credit losses (ECLs) for all debt instruments not held at fair value through profit or loss. ECLs are based on the difference between the contractual cash flows due in accordance with the contract and all the cash flows that the Group expects to receive, discounted at an approximation of the original effective interest rate. The expected cash flows will include cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms.

ECLs are recognised in two stages. For credit exposures for which there has not been a significant increase in credit risk since initial recognition, ECLs are provided for credit losses that result from default events that are possible within the next 12-months (a 12-month ECL). For those credit exposures for which there has been a significant increase in credit risk since initial recognition, a loss allowance is required for credit losses expected over the remaining life of the exposure, irrespective of the timing of the default (a lifetime ECL).

For trade receivables and contract assets, the Group applies a simplified approach in calculating ECLs. Therefore, the Group does not track changes in credit risk, but instead recognises a loss allowance based on lifetime ECLs at each reporting date.

For debt instruments at fair value through OCI, the Group applies the low credit risk simplification. At every reporting date, the Group evaluates whether the debt instrument is considered to have low credit risk using all reasonable and supportable information that is available without undue cost or effort. In making that evaluation, the Group reassesses the risk of the debt instruments. In addition, the Group considers that there has been a significant increase in credit risk when contractual payments are more than 30 days past due.

The Group considers a financial asset in default when contractual payments are 90 days past due. However, in certain cases, the Group may also consider a financial asset to be in default when internal or external information indicates that the Group is unlikely to receive the outstanding contractual amounts in full before taking into account any credit enhancements held by the Group. A financial asset is written off when there is no reasonable expectation of recovering the contractual cash flows.

ii. Financial liabilities

Initial recognition and measurement

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, borrowings, payables, or as derivatives designated as hedging instruments in an effective hedge, as appropriate.

All financial liabilities are recognised initially at fair value and in the case of loans and borrowings and payables, net of directly attributable transaction costs.

The Group's financial liabilities include trade and other payables, loans and borrowings including bank overdrafts and derivative financial instruments.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

Subsequent measurement

For purposes of subsequent measurement, financial liabilities are classified in two categories:

- Financial liabilities at fair value through profit or loss
- Financial liabilities at amortised cost (loans and borrowings)

Financial liabilities at fair value through profit or loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss.

Financial liabilities are classified as held for trading if they are incurred for the purpose of repurchasing in the near term. This category also includes derivative financial instruments entered into by the Group that are not designated as hedging instruments in hedge relationships as defined by accounting standards. Separated embedded derivatives are also classified as held for trading unless they are designated as effective hedging instruments.

Gains or losses on liabilities held for trading are recognised in the statement of profit or loss.

Financial liabilities designated upon initial recognition at fair value through profit or loss are designated at the initial date of recognition and only if the criteria in accounting standards are satisfied.

Financial liabilities at amortised cost

After initial recognition, interest-bearing borrowings and instruments are subsequently measured at amortised cost using the EIR method. Gains and losses are recognised in profit or loss when the liabilities are derecognised as well as through the EIR amortisation process.

Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the statement of profit or loss.

This category generally applies to interest-bearing borrowings and instruments.

Derecognition

A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as the derecognition of the original liability and the recognition of a new liability. The difference in the respective carrying amounts is recognised in the statement of profit or loss.

iii. Offsetting of financial instruments

Financial assets and financial liabilities are offset and the net amount is reported in the consolidated financial statement of financial position if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, to realise the assets and settle the liabilities simultaneously.

iv. Derivative financial instruments and hedge accounting

Initial recognition and subsequent measurement

The Group uses derivative financial instruments, such as forward currency contracts and interest rate swaps, to hedge its foreign currency risks and interest rate risks, respectively. Such derivative financial instruments are initially recognised at fair value on the date on which a derivative contract is entered into and are subsequently remeasured at fair value. Derivatives are carried as financial assets when the fair value is positive and as financial liabilities when the fair value is negative.

For the purpose of hedge accounting, hedges are classified as:

- Fair value hedges when hedging the exposure to changes in the fair value of a recognised asset or liability or an unrecognised firm commitment
- Cash flow hedges when hedging the exposure to variability in cash flows that is either attributable to a particular risk associated with a recognised asset or liability or a highly probable forecast transaction or the foreign currency risk in an unrecognised firm commitment

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

- Hedges of a net investment in a foreign operation

At the inception of a hedge relationship, the Group formally designates and documents the hedge relationship to which it wishes to apply hedge accounting and the risk management objective and strategy for undertaking the hedge.

The documentation includes identification of the hedging instrument, the hedged item, the nature of the risk being hedged and how the Group will assess whether the hedging relationship meets the hedge effectiveness requirements (including the analysis of sources of hedge ineffectiveness and how the hedge ratio is determined).

A hedging relationship qualifies for hedge accounting if it meets all of the following effectiveness requirements:

- There is 'an economic relationship' between the hedged item and the hedging instrument.
- The effect of credit risk does not 'dominate the value changes' that result from that economic relationship.
- The hedge ratio of the hedging relationship is the same as that resulting from the quantity of the hedged item that the Group actually hedges and the quantity of the hedging instrument that the Group actually uses to hedge that quantity of hedged item

Hedges that meet all the qualifying criteria for hedge accounting are accounted for, as described below:

Fair value hedges

The change in the fair value of a hedging instrument is recognised in the statement of profit or loss as other expense. The change in the fair value of the hedged item attributable to the risk hedged is recorded as part of the carrying value of the hedged item and is also recognised in the statement of profit or loss as other expense.

For fair value hedges relating to items carried at amortised cost, any adjustment to carrying value is amortised through profit or loss over

the remaining term of the hedge using the EIR method. The EIR amortisation may begin as soon as an adjustment exists and no later than when the hedged item ceases to be adjusted for changes in its fair value attributable to the risk being hedged.

If the hedged item is derecognised, the unamortised fair value is recognised immediately in profit or loss.

When an unrecognised firm commitment is designated as a hedged item, the subsequent cumulative change in the fair value of the firm commitment attributable to the hedged risk is recognised as an asset or liability with a corresponding gain or loss recognised in profit or loss.

v Dividend and interest income

- a. Dividend income from investments is recognised when the shareholder's right to receive payment has been established (provided that it is probable that the economic benefits will flow to the Group and the amount of income can be measured reliably).
- b. Interest income from a financial asset is recognised when it is probable that the economic benefits will flow to the Group and the amount of income can be measured reliably. Interest income is accrued on a time basis, by reference to the principal outstanding and at the effective interest rate applicable, which is the rate that exactly discounts estimated future cash receipts through the expected life of the financial asset to that asset's net carrying amount on initial recognition.

7.18 Foreign currency transactions

The functional currency of the Group is Indian Rupee (₹). Foreign currency transactions are recorded at the exchange rates prevailing on the date of the transactions.

Monetary assets and liabilities denominated in foreign currencies are translated into the functional currency at the closing exchange rates prevailing at the reporting date. Exchange differences arising on settlement or translation of monetary items are recognised in the Statement of Profit and Loss in

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

the period in which they arise, except for exchange differences relating to qualifying cash flow hedges, which are recognised in Other Comprehensive Income (OCI) to the extent the hedge is effective.

Non-monetary items measured at historical cost in a foreign currency are not retranslated. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value is determined.

7.19 Research and development expenditure

Research expenditure is recognised in the Statement of Profit and Loss in the period in which it is incurred.

Development expenditure incurred on an individual project is recognised as an intangible asset only when the Group can demonstrate all of the following:

- (a) the technical feasibility of completing the intangible asset so that it will be available for use or sale;
- (b) its intention to complete the intangible asset and use or sell it;
- (c) its ability to use or sell the intangible asset;
- (d) the manner in which the intangible asset will generate probable future economic benefits;
- (e) the availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible asset; and
- (f) its ability to measure reliably the expenditure attributable to the intangible asset during its development.

All other development expenditure that does not meet the above criteria is expensed in the Statement of Profit and Loss as incurred.

7.20 Segment reporting

Operating segments are reported in a manner consistent with the internal reporting provided to the Chief Operating Decision Maker (CODM) of the Group. The CODM, comprising the Board of Directors, Vice Chairman and Managing Director and Chief Financial Officer of the Holding Company, examines the Group's performance on the basis of a single operating segment, namely electronic goods. Accordingly, no separate segment disclosures are presented in accordance with Ind AS 108 - Operating Segments.

7.21 Dividend distribution

Final dividend on equity shares recommended by the Board of Directors is recognised as a liability in the period in which it is approved by the shareholders in the Annual General Meeting. Interim dividends are recognised as a liability in the period in which they are declared by the Board of Directors.

7.22 Trade payables

Trade payables represent obligations to pay for goods or services that have been acquired in the ordinary course of business from suppliers. Trade payables are recognised initially at fair value and subsequently measured at amortised cost using the effective interest method.

Disclosures relating to amounts due to Micro, Small and Medium Enterprises (MSME) are made in accordance with the Micro, Small and Medium Enterprises Development Act, 2006, based on information available with the Group regarding the status of the suppliers.

8 RECENT ACCOUNTING PRONOUNCEMENTS

The Ministry of Corporate Affairs ("MCA"), vide notifications G.S.R. 291(E) dated 7th May, 2025 and G.S.R. 549(E) dated 13th August, 2025, has notified the Companies (Indian Accounting Standards) Amendment Rules, 2025 and the Companies (Indian Accounting Standards) Second Amendment Rules, 2025, amending certain Indian Accounting Standards effective for annual reporting periods beginning on or after 1st April, 2025. The Group has applied these amendments, to the extent applicable, in the preparation of these financial statements.

The principal amendments include:

Ind AS 21 — The Effects of Changes in Foreign Exchange Rates (Lack of Exchangeability)

Introduces guidance on assessing whether a currency is exchangeable into another currency, estimating the spot exchange rate when a currency is not exchangeable, and the related disclosure requirements.

Ind AS 1 — Presentation of Financial Statements (Classification of Liabilities as Current or Non-current; Non-current Liabilities with Covenants)

Refocuses classification on the entity's right to defer settlement existing at the end of the reporting period, requires the right to have substance, and introduces

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

additional disclosure requirements for non-current liabilities subject to future covenants.

Ind AS 7 – Statement of Cash Flows and Ind AS 107 – Financial Instruments: Disclosures (Supplier Finance Arrangements):

Introduce qualitative and quantitative disclosure requirements for supplier finance arrangements (including reverse factoring) to enable users of the financial statements to assess the effect of such arrangements on the entity's liabilities, cash flows and exposure to liquidity risk.

Ind AS 12 – Income Taxes (International Tax Reform – Pillar Two Model Rules)

Introduces a temporary mandatory exception from recognising and disclosing information about deferred tax assets and liabilities arising from the OECD Pillar Two model rules, together with targeted disclosure requirements for entities within the scope of these rules.

In addition, consequential and editorial amendments have been made to Ind AS 101 – First-time Adoption of Indian Accounting Standards, Ind AS 108 – Operating Segments, Ind AS 109 – Financial Instruments, Ind AS 115 – Revenue from Contracts with Customers, Ind AS 28 – Investments in Associates and Joint Ventures and Ind AS 32 – Financial Instruments: Presentation, primarily to align with international practices and ensure internal consistency.

The Group has assessed the above amendments and concluded that they did not have a material impact on the recognition, measurement, presentation or disclosure of items in the financial statements. Specifically, the Group does not have material exposures to currencies that are not exchangeable at the reporting date; has evaluated the terms of its borrowing arrangements and concluded that the amendments to Ind AS 1 did not result in a material change in the classification of its liabilities; has not entered into supplier finance arrangements requiring additional disclosure under amended Ind AS 7 and Ind AS 107; and is not within the scope of the OECD Pillar Two model rules requiring application of the exception or related disclosures under Ind AS 12.

B. Amendments adopted in the prior year that continue to be in effect

For completeness, the Group has continued to apply the amendments notified by the MCA

during the previous year, effective for annual reporting periods beginning on or after 1st April, 2024, comprising:

Ind AS 117 – Insurance Contracts and consequential amendments to other Indian Accounting Standards, notified vide the Companies (Indian Accounting Standards) Amendment Rules, 2024 (G.S.R. 492(E) dated 12th August, 2024); and

Amendments to Ind AS 116 – Leases in respect of Lease Liability in a Sale and Leaseback, notified vide the Companies (Indian Accounting Standards) Second Amendment Rules, 2024 (G.S.R. 554(E) dated 9th September, 2024).

The Group has evaluated these amendments and concluded that they are either not applicable or do not have a material impact on its financial statements.

C. New and amended standards issued but not yet effective

The MCA, vide notification G.S.R. 549(E) dated 13th August, 2025, has also notified amendments to Ind AS 1 – Presentation of Financial Statements and Ind AS 10 – Events after the Reporting Period relating to the alignment of classification and subsequent-event guidance for liabilities subject to covenants, including the substitution of the term "provision" with "covenant" for consistency. These amendments are effective for annual reporting periods beginning on or after 1st April, 2026.

The Group has evaluated the above amendments and does not expect them to have a material impact on its consolidated financial statements.

9 SIGNIFICANT JUDGEMENTS AND KEY SOURCES OF ESTIMATION IN APPLYING ACCOUNTING POLICIES

Information about significant judgments and key sources of estimation made in applying accounting policies that have the most significant effects on the amounts recognised in the financial statements is included in the following notes:

- a. Recognition of Deferred Tax Assets: The extent to which deferred tax assets can be recognised is based on an assessment of the probability of the Group's future taxable income against

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

which the deferred tax assets can be utilised. In addition, significant judgment is required in assessing the impact of any legal or economic limits.

- b. Useful lives of depreciable/amortisable assets (tangible and intangible): Management reviews its estimate of the useful lives of depreciable/amortisable assets at each reporting date, based on the expected utility of the assets. Uncertainties in these estimates relate to actual normal wear and tear that may change the utility of plant and equipment.
- c. Classification of Leases: The Group enters into leasing arrangements for various assets. The classification of the leasing arrangement as a finance lease or operating lease is based on an assessment of several factors, including, but not limited to, transfer of ownership of leased asset at end of lease term, lessee's option to purchase and estimated certainty of exercise of such option, proportion of lease term to the asset's economic life, proportion of present value of minimum lease payments to fair value of leased asset and extent of specialised nature of the leased asset.
- d. Employee benefit: Employee benefits obligations are measured on the basis of actuarial assumptions which include mortality and withdrawal rates as well as assumptions concerning future developments in discount rates, medical cost trends, anticipation of future salary increases and the inflation rate. The Group considers that the assumptions used to measure its obligations are appropriate. However, any changes in these assumptions may have a material impact on the resulting calculations.
- e. Provisions and Contingencies: The assessments undertaken in recognising provisions and contingencies have been made in accordance with Indian Accounting Standards (Ind AS) 37, 'Provisions, Contingent Liabilities and Contingent Assets'. The evaluation of the likelihood of the contingent events is applied best judgment by management regarding the probability of exposure to potential loss.
- f. Impairment of financial assets: The Group reviews its carrying value of investments carried at amortised cost annually, or more frequently when there is an indication of impairment. If the recoverable amount is less than its carrying amount, the impairment loss is accounted for.
- g. Fair value measurement of Financial Instruments: When the fair values of financial assets and financial liabilities recorded in the balance sheet cannot be measured based on quoted prices in active markets, their fair value is measured using valuation techniques including the Discounted Cash Flow model. The input to these models is taken from observable markets where possible, but where this is not feasible, a degree of judgment is required in establishing fair values. Judgments include considerations of inputs such as liquidity risk, credit risk and volatility.
- h. Warranty : Warranty Provision is measured at discounted present value using a pre-tax discount rate that reflects the current market assessments of the time value of money and the risks specific to the liability. Product warranty liability and warranty expenses are recorded at the time the product is sold, if the claims of the customers under warranty are probable and the amount can be reasonably estimated.

Notes:

- Land includes, freehold land located at Plot no C 2/i, Selaqui, Dehradun, Uttarakhand, which was purchased through auction from a Bank during the financial year 2016-17. The aforesaid land is registered in the name of the Company. A party has initiated legal case disputing ownership of the said land at various courts/ tribunals, including Hon'ble Debt Recovery Tribunal at Lucknow and Dehradun ('DRT') and Hon'ble Debt Recovery Appellate Tribunal, Allahabad ('DRAT') and Hon'ble Nainital High Court. The matter has been decided by DRAT in the favour of the Holding Company. The Holding Company, being bonafide purchaser of the said land under the auction carried out by the Bank as per SARFAESI Act, 2002 is defending the matters at Hon'ble Nainital High Court. As on date, the matter is sub-judice. The cost of land is ₹ 250 Lakhs and capital assets created thereon is having the net block of ₹ 2,026 Lakhs as at 31st March, 2026.
- For information of the assets pledged as security against borrowings, see note 27, 33 and 47.
- There are no proceedings against the Group, that have been initiated or pending against it for holding any benami property under the Benami Transactions (Prohibition) Act, 1988 (45 of 1988) and the rules made thereunder.

Notes:
(i) Goodwill on account of acquisitions

- During the year ended 31st March, 2022, the subsidiary company Dixon Electro Appliances Private Limited purchased the business by entering into a Business Transfer Agreement (BTA) with Beetel Teletech Limited on a going concern basis by way of slump sale with effect from the closing of business hours of 21st December, 2021 for a total consideration of ₹ 4,080 Lakhs.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

15 GOODWILL (Contd..)

- b. During the year ended 31st March, 2025, the Holding Company has acquired 50.10% stake in Ismartu India Private Limited for a total consideration of ₹ 32,234 Lakhs. Ismartu India Private Limited became a subsidiary of the Company with effect from the closing of business hours of 13th August, 2024.
- c. During the year ended 31st March, 2026, the Holding Company has acquired 51% of the paid-up share capital of Kunshan Q Tech Microelectronics (India) Private Limited ("Q Tech India") pursuant to a Share Subscription and Purchase Agreement dated 17th September, 2025 for a total consideration of ₹ 55,300 Lakhs. Q Tech India became a subsidiary of the Company with effect from 26th September, 2025.

(ii) Impairment of Goodwill with indefinite useful life

- a. The subsidiary company, Dixon Electro Appliances Private Limited has single Cash Generating Unit (CGU). The recoverable amount of cash-generating units is determined based on a value in use calculation which uses cash flow projections based on financial forecasts covering a five-year period, and a discount rate of 18.14% per annum.
- b. The subsidiary company, Ismartu India Private Limited has single Cash Generating Unit (CGU). The recoverable amount of cash-generating units is determined based on a value in use calculation which uses cash flow projections based on financial forecasts covering a five-year period, and a discount rate of 18.99% per annum.

However, the management has assessed the Group's goodwill at the end of the year and found no indication of impairment as of 31st March, 2026.

- d. During the year, Corporate guarantee of Holding Company, stand released during the year.

IV. External commercial borrowing (ECB)

The Group has availed unsecured external commercial borrowings (ECB) from its related parties, Kunshan Q Technology International Limited and Kunshan Q Technology (Hong Kong) Limited, for the development of new projects under various loan agreements, as detailed below.

a. Rate of Interest

4.07% (1 year Secured overnight financing rate (SOFR) + 0.25% p.a.).

The Group and the parties have mutually agreed to pay interest on semi-annual basis.

b. Movement in ECB during the years

The Group has taken further ECB in financial year ended 31st March, 2026 from its Related party "Kunshan Q Technology Hong Kong Ltd" of USD 10 Million.

The Group renegotiated the terms with the lenders, and the maturity period of the ECB (LRN 202008167) amounting to USD 7 Million was extended from 15th September, 2025 to 30th September, 2027. Accordingly, the same has been reclassified as non-current borrowings in the financial year ended 31st March, 2026.

The Group repaid the ECB amounting to USD 20 Million during the financial year ended 31st March, 2025.

The Group has received a complete waiver from the lender of interest payable on the total principal amount of ECB outstanding on or after 1st December, 2021 and any future interest that may accrue. The Group has intimated its AD Bank "HSBC Bank" vide letter dated 16th January, 2023 about the said interest waiver. The Lender has also submitted a consent letter to the AD Bank dated 16th January, 2023 confirming the revised terms for the interest waiver. HSBC Bank, vide their email dated 12th October, 2023, confirmed that the interest waiver request is a one-way communication to RBI and no approval of the same is required from RBI. The said agreement has been amended with effect from 1st September, 2025, and the revised terms are as follows:

1. Interest on the aforesaid ECBs is agreed to be equivalent to the annual interest rate of the one-year Secured Overnight Financing Rate ("1 Year SOFR") as published by the Federal Reserve Bank of New York plus 25 basis points (0.25%) per annum on the outstanding loan amount.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

27 BORROWINGS (Contd..)

2. The interest shall be paid semi-annually starting from 1st September, 2025 until the entire repayment of the loan amount.

The ECB balance is restated at exchange rates prevailing as at 31st March, 2026.

V Non-cumulative, compulsorily redeemable preference shares

- a. The Group has issued 88,20,000 (No's) of 6% unsecured non cumulative, compulsorily redeemable preference Shares of ₹ 10 each (face value) for an aggregate consideration of ₹ 882 Lakhs on right issue basis to the existing equity shareholders i.e. Beetel Teletech Limited. The preference shares have been redeemed by the Group during the year.
- b. **Other terms:**
- Non-cumulative dividend right.
 - Compulsorily redeemable on completion of 10 years from the date of allotment

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

46 CONTINGENT LIABILITIES AND COMMITMENTS (TO THE EXTENT NOT PROVIDED FOR) (Contd..)

Particulars	As at 31 st March, 2026	As at 31 st March, 2025
	₹ / Lakhs	₹ / Lakhs
c. Other money for which the Company is contingently liable		
i. Letters of credit (outstanding)	66,324	46,633
ii. Bill discounting with banks	-	49,358
iii. a) Bond given to custom department on behalf of the joint venture company	100	100
b) Bond given to custom department under authorised economic operator	18,555	18,756

Notes:

- The Group has reviewed its disputed liabilities and proceedings and does not expect material impact on financial position of the Group.
- The Group had provided corporate guarantees of ₹ 56,793 lakhs to two suppliers on behalf of subsidiary for business purpose. The guarantee provided to one supplier is without any specified limit.

*The Custom duty cases include cases where Search was conducted by Directorate of Revenue Intelligence (DRI) at the premises of the Holding Company and its two Subsidiary Companies on 20th December, 2021, 24th December, 2021 and 24th January, 2024. During the investigation, questions were raised regarding the interpretation of the classification of imported goods. In respect of the search conducted at the Holding Company, a Show Cause Notice (SCN) was received from the Department in an earlier year. In respect of the search conducted at one of the Subsidiary Companies on 24th December, 2021, the Subsidiary Company had made an ad-hoc deposit of ₹ 700 Lakhs to avoid any unnecessary business interruption. A Show Cause Notice (SCN) was received from the Department in the previous financial year, wherein a demand of ₹ 624 Lakhs was raised. The matter was adjudicated during the current year and an order was passed in favour of the Subsidiary Company. Consequently, the ad-hoc deposit of ₹ 700 Lakhs became refundable and has been subsequently received by the Subsidiary Company. In respect of the search conducted at the other Subsidiary Company on 24th January, 2024, the Subsidiary Company had made an ad-hoc deposit of ₹ 776 Lakhs, which was charged to the Statement of Profit and Loss in an earlier year. During the current year, this Subsidiary Company has received a Show Cause Notice (SCN) from the Department proposing a demand of ₹ 3,492 Lakhs. The Subsidiary Company has a strong case on merits and is in the process of filing its reply against the said SCN. Pending final adjudication, the net amount of ₹ 2,716 Lakhs, after adjusting the ad-hoc deposit of ₹ 776 Lakhs, has been disclosed as a contingent liability as at 31st March, 2026. The management is of the view that the Holding Company and the Subsidiary Company are in compliance with applicable laws and have strong grounds to succeed against any dispute or demand and accordingly, no liability is expected to arise.

Particulars	As at 31 st March, 2026	As at 31 st March, 2025
	₹ / Lakhs	₹ / Lakhs
d. Capital commitments:		
Estimated amount of contracts remaining to be executed on capital account and not provided	29,359	16,233

- The Group has other commitments, for purchase of goods and services and employee benefits, in the normal course of business.
- There are no amount which were required to be transferred to Investor Education and Protection Fund by the Group.
- The Group did not have any long-term contracts including derivative contracts for which there were any material foreseeable losses.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, regardless of whether that price is directly observable or estimated using another valuation technique. In estimating the fair value of an asset or a liability, the Group takes into account the characteristics of the asset or liability if market participants would take those characteristics into account when pricing the asset or liability at the measurement date. Fair value for measurement and/or disclosure purposes in these consolidated financial statements is determined on such a basis, except for share-based payment transactions that are within the scope of Ind AS 102, leasing

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

51 FINANCIAL INSTRUMENTS (Contd..)

transactions that are within the scope of Ind AS 116, and measurements that have some similarities to fair value but are not fair value, such as net realisable value in Ind AS 2 or value in use in Ind AS 36.

In addition, for financial reporting purposes, fair value measurements are categorised into Level 1, 2 or 3 based on the degree to which the inputs to the fair value measurements are observable and the significance of the inputs to the fair value measurements in its entirety, which are described as follows:

Level I: includes financial instruments measured using quoted prices. This includes listed equity instruments, ETFs and mutual funds that have quoted price. The fair value of all equity instruments which are traded in the stock exchanges is valued using the closing price as at the reporting period. The mutual funds are valued using the closing NAV.

Level II: The fair value of financial instruments that are not traded in an active market (for example, traded bonds, over-the counter derivatives) is determined using valuation techniques which maximise the use of observable market data and rely as little as possible on entity-specific estimates. If all significant inputs required to fair value an instrument are observable, the instrument is included in level 2.

Level III: If one or more of the significant inputs is not based on observable market data, the instrument is included in level 3. This is the case for unlisted equity securities, contingent consideration and indemnification asset included in level 3.

The Group's management assessed that cash and cash equivalents, trade receivables, trade payables, working capital fund and other current liabilities approximate their carrying amounts largely due to the short-term maturities of these instruments.

The fair value of the financial assets and liabilities is included at the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. The following methods and assumptions were used to estimate the fair values:

- i. Long-term fixed-rate and variable-rate receivables/borrowings are evaluated by the Group based on parameters such as interest rates, country specific risk factors, individual creditworthiness of the customer and the risk characteristics of the financed project. Based on this evaluation, allowances are taken into account for the expected credit losses of these receivables.
- ii. The fair values of the quoted notes and bonds are based on price quotations at the reporting date. The fair value of unquoted instruments, loans from banks and other financial liabilities, obligations under finance leases, as well as other non-current financial liabilities is estimated by discounting future cash flows using rates currently available for debt on similar terms, credit risk and remaining maturities. In addition to being sensitive to a reasonably possible change in the forecast cash flows or the discount rate, the fair value of the equity instruments is also sensitive to a reasonably possible change in the growth rates. The valuation requires management to use Unobservable inputs in the model, of which the significant unobservable inputs are disclosed in the tables below. Management regularly assesses a range of reasonably possible alternatives for those significant unobservable inputs and determines their impact on the total fair value.
- iii. The fair values of the remaining fair value through other comprehensive income "FVTOCI" financial assets are derived from quoted market prices in active markets.
- iv. The Group enters into derivative financial instruments with various counterparties, principally financial institutions with investment grade credit ratings. Interest rate swaps, foreign exchange forward contracts and commodity forward contracts are valued using valuation techniques, which employs the use of market observable inputs. The most frequently applied valuation techniques include forward pricing and swap models, using present value calculations. The models incorporate various inputs including the credit quality of counterparties, foreign exchange spot and forward rates, yield curves of the respective currencies, currency basis spreads between the respective currencies, interest rate curves and forward

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

51 FINANCIAL INSTRUMENTS (Contd..)

rate curves of the underlying commodity. All derivative contracts are fully cash collateralised, thereby eliminating both counterparty and the Group's own non-performance risk. As at 31st March, 2026, the marked-to-market value of derivative asset positions is net of a credit valuation adjustment attributable to derivative counterparty default risk. The changes in counterparty credit risk had no material effect on the hedge effectiveness assessment for derivatives designated in hedge relationships and other financial instruments recognised at fair value.

b. Fair value hierarchy

The disclosure of the financial instruments measured at fair value and valuation technique are as follows:

Particulars	Fair value hierarchy	As at 31 st March, 2026	As at 31 st March, 2025
		₹ / Lakhs	₹ / Lakhs
Financial Assets			
Outstanding forward contracts (MTM,FVTPL)	Level II	453	-

	Level I	50,531	-
Investments in mutual fund	Level I	30,031	-
Financial liabilities			
Outstanding forward contracts (MTM,FVTPL)	Level II	-	52

c. Financials risk management objectives and policies:

The Group's principal financial liabilities comprise liabilities, trade and other payables. The main purpose of these financial liabilities is to finance the Group's operations. The Group's principal financial assets include loans, trade and other receivables, and cash and cash equivalents that are derived directly from its operations.

The Group's financial risk management is an integral part of how to plan and execute its business strategies. The Group is exposed to market risk, credit risk and liquidity risk.

The Group's senior management oversees the management of these risks. The senior professionals working to manage the financial risks and the appropriate financial risk governance framework for the Group's are accountable to the Board of Directors and Audit Committee. This process provides assurance to Group's senior management that the Company's financial risk-taking activities are governed by appropriate policies and procedures and that financial risk are identified, measured and managed in accordance with Group's policies and Group risk objective.

d. Financial risk management

The Group's senior management oversees the risk management framework and developing and monitoring the Company's risk management policies. The risk management policies are established to ensure timely identification and evaluation of risks, setting acceptable risk thresholds, identifying and mapping controls against these risks, monitor the risks and their limits, improve risk awareness and transparency. Risk management policies and systems are reviewed regularly to reflect changes in the market conditions and the Group's activities to provide reliable information to the Management and the Board to evaluate the adequacy of the risk management framework in relation to the risk faced by the Group.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

51 FINANCIAL INSTRUMENTS (Contd..)

The risk management policies aim to mitigate the following risks arising from the financial instruments:

- Market risk
- Credit risk
- Liquidity risk

A Market risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in the market prices. The Group is exposed in the ordinary course of its business to risks related to changes in foreign currency exchange rates, commodity prices and interest rates.

The Group seeks to minimise the effects of these risks by using derivative financial instruments to hedge risk exposures. The use of financial derivatives is governed by the Company's policies approved by the Board of Directors, which provide written principles on foreign exchange risk, interest rate risk, credit risk, the use of financial derivatives and non-derivative financial instruments, and the investment of excess liquidity. Compliance with policies and exposure limits is reviewed by the Management and the internal auditors on a continuous basis. The Group does not enter into or trade financial instruments, including derivatives for speculative purposes.

I. Currency risk

- a. The operations of the Group give exposure to foreign exchange risk arising from foreign currency transactions and foreign currency loans, primarily with respect to the USD, CNY and JPY. Foreign exchange risk arises from future commercial transactions and recognised assets and liabilities denominated in a currency that is not the Group's functional currency (₹). The risk is measured through a forecast of highly probable foreign currency cash flows. The Group hedge the foreign currency exposure. The objective of the hedges is to minimise the volatility of the ₹ cash flows of highly probable forecast transactions.
- b. The Group uses foreign exchange forward contracts to hedge its exposure in foreign currency risk. The Group measures the forward contract at fair value through profit and loss.
- c. The spot component of forward contracts is determined with reference to relevant spot market exchange rates. The differential between the contracted forward rate and the spot market exchange rate is defined as the forward points.

The foreign currency exposures for the year ended are as follows:

Particulars		As at 31 st March, 2026			As at 31 st March, 2025		
		Total	Hedged	Unhedged	Total	Hedged	Unhedged
Borrowing	In USD / Lakhs	380	380	-	-	-	-

	In CNY / Lakhs	13	-	13	-	-	-
	In ₹ / Lakhs	59,074	-	59,074	56,396	-	56,396

i. Foreign currency risk exposure

Particulars	As at 31 st March, 2026	As at 31 st March, 2025
	₹ / Lakhs	₹ / Lakhs
Financial assets	59,074	56,396
Financial liabilities	8,14,312	7,54,696
Net exposure (liabilities)	7,55,238	6,98,300

ii. Sensitivity

The details of the Group's sensitivity to a 1% increase and decrease in the ₹ against the relevant foreign currency. 1% is the sensitivity rate used when reporting foreign currency risk internally to key management personnel and represents management's assessment of the reasonably possible change in foreign exchange rates.

Particulars	As at 31 st March, 2026	As at 31 st March, 2025
	₹ / Lakhs	₹ / Lakhs
Impact on profit or loss before tax	7,552	6,983
Impact on total equity as at the end of reporting year	5,651	5,226

Impact on profit for the year are gross of tax and impact on total equity is net of tax.

II. Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Group is exposed to interest rate risk because funds are borrowed at both fixed and floating interest rates. Interest rate risk is measured by using the cash flow sensitivity for changes in variable interest rate. The borrowings of the Group are principally

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

51 FINANCIAL INSTRUMENTS (Contd..)

denominated in rupees with a mix of fixed and floating rates of interest. The Group has exposure to interest rate risk, arising principally on changes in base lending rate and LIBOR rates. The Group uses a mix of interest rate sensitive financial instruments to manage the liquidity and fund requirements for its day-to-day operations like non-convertible bonds and short-term loans. The risk is managed by the Group by maintaining an appropriate mix between fixed and floating rate borrowings, and by the use of interest rate swap contracts. Hedging activities are evaluated regularly to align with interest rate views and defined risk appetite, ensuring the most cost-effective hedging strategies are applied.

The following table provides a break-up of the Group's fixed and floating rate borrowings:

a. Interest rate risk exposure

Particulars	As at 31 st March, 2026	As at 31 st March, 2025
	₹ / Lakhs	₹ / Lakhs
Variable rate borrowings	46,750	19,346
Fixed rate borrowings	-	882
	46,750	20,228

b. Sensitivity analysis

The sensitivity analyses below have been determined based on the exposure to interest rates for floating rate liabilities, after the impact of hedge accounting, assuming the amount of the liability outstanding at the year-end was outstanding for the whole year.

Particulars	As at 31 st March, 2026	As at 31 st March, 2025
	₹ / Lakhs	₹ / Lakhs
The details of the Company's sensitivity to a 1% increase and decrease in interest rate are as follows:		
Impact on profit or loss for the year	468	193
Impact on total equity as at the end of reporting year	350	145

Impact on profit for the year are gross of tax and impact on total equity is net of tax

III. Other price risks

The Group is exposed to equity price risks arising from equity investments.

Equity investments in listed/unlisted entities are held for strategic rather than trading purposes. The Group does not actively trade these investments.

Equity price sensitivity analysis

Group has invested mostly in subsidiaries and joint venture. Hence no amount recognised in the statement of profit and loss as all amount of investment are carried at cost.

B Credit Risk Management

Credit risk refers to the risk that a counterparty will default on its contractual obligations resulting in financial loss to the Group. Credit risk encompasses both, the direct risk of default and the risk of deterioration of creditworthiness as well as concentration risks. The Group has adopted a policy of only dealing with creditworthy counterparties and obtaining sufficient collateral, where appropriate, as a means of mitigating the risk of financial loss from defaults.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

51 FINANCIAL INSTRUMENTS (Contd..)

For other financial assets, the Group assesses and manages credit risk based on internal credit rating system. The finance function consists of a separate team who assesses and maintains an internal credit rating system. Internal credit rating is performed on a group basis for each class of financial instruments with different characteristics.

The Company's exposure to customers is diversified and three customers contributes to more than 10% of outstanding trade receivable.

Reconciliation of loss allowance provision

Particulars	As at 31 st March, 2026	As at 31 st March, 2025
	₹ / Lakhs	₹ / Lakhs
Opening balance	678	129
Additional provision made (net)	956	549
Closing provision	1,634	678

The provision for loss allowances of trade receivables have been made by the management on the evaluation of trade receivables. The management at each reporting period made an assessment on recoverability of balances and on the best estimate basis the provision for loss allowances have been created.

C Liquidity risk management

- Liquidity risk refers to the risk of financial distress or extraordinary high financing costs arising due to shortage of liquid funds in a situation where business conditions unexpectedly deteriorate and requiring financing. The Group requires funds both for short-term operational needs as well as for long-term capital expenditure growth projects. The Group generates sufficient cash flow for operations, which together with the available cash and cash equivalents and short-term investments provide liquidity in the short-term and long-term. The Group has established an appropriate liquidity risk management framework for the management of the Group's short, medium and long-term funding and liquidity management requirements. The Group manages liquidity risk by maintaining adequate reserves, banking facilities and reserve borrowing facilities, by continuously monitoring forecast and actual cash flows and by matching the maturity profiles of financial assets and liabilities.
- The following tables detail the Group's remaining contractual maturity for its non-derivative financial liabilities with agreed repayment periods. The tables have been drawn up based on the cash flows of financial liabilities based on the earliest date on which the Group can be required to pay.

The tables include principal cash flows. The contractual maturity is based on the earliest date on which the Group may be required to pay.

Maturities of financial liabilities

As on 31 st March, 2026	0-12 Months	1-3 years	3-5 years	More than 5 year	Total
	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs
Long-term borrowings	-	23,758	12,211	-	35,969
Short-term borrowings	10,781	-	-	-	10,781
Trade payables	10,72,218	-	-	-	10,72,218
Lease liabilities	6,598	11,107	11,860	23,107	52,672
Other financial liabilities	1,26,307	3,979	-	-	1,30,286

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

51 FINANCIAL INSTRUMENTS (Contd..)

As on 31 st March, 2025	0-12 Months	1-3 years	3-5 years	More than 5 year	Total
	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs
Long-term borrowings	-	4,443	2,428	1,218	8,089
Short-term borrowings	12,139	-	-	-	12,139
Trade payables	10,88,365	-	-	-	10,88,365
Lease liabilities	5,089	11,048	10,647	20,084	46,868
Other financial liabilities	1,39,740	6,008	-	-	1,45,748

The following table details the Group's expected maturity for its non-derivative financial assets. The table has been drawn up based on the contractual maturities of the financial assets including interest that will be earned on those assets. The inclusion of information on non-derivative financial assets is necessary in order to understand the Group's liquidity risk management as the liquidity is managed on a net asset and liability basis.

Maturities of financial assets

As on 31 st March, 2026	0-12 months	1-3 years	3-5 years	More than 5 years	Total
	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs
Other financial assets	1,23,849	9,615	-	4,073	1,37,537

Trade receivables	6,52,991	-	-	-	6,52,991
Cash and cash equivalents	76,743	-	-	-	76,743
Bank balances other than cash and cash equivalent	17,363	-	-	-	17,363

As on 31 st March, 2025	0-12 months	1-3 years	3-5 years	More than 5 years	Total
	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs	₹ / Lakhs
Other financial assets	1,44,541	-	-	5,106	1,49,647
Investments	-	-	-	53,560	53,560
Trade receivables	6,96,545	-	-	-	6,96,545
Cash and cash equivalents	23,085	-	-	-	23,085
Bank balances other than cash and cash equivalent	3,268	-	-	-	3,268

e. Capital management

For the purpose of the Group's capital management, capital includes issued equity capital, share premium and all other equity reserves attributable to the equity holders of the parent. The primary objective of the Group's capital management is to maximise the shareholder value.

The Group manages its capital structure and makes adjustments in light of changes in economic conditions and the requirements of the financial covenants. To maintain or adjust the capital structure, the Group may adjust the dividend payment to shareholders, return capital to shareholders or issue new shares. The Group monitors capital using a gearing ratio, which is net debt divided by total capital.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

51 FINANCIAL INSTRUMENTS (Contd..)

The Group monitors its capital using gearing ratio, which is net debt divided by total equity. Net debt includes, interest bearing loans and borrowings less cash and cash equivalents and current investments.

Particulars	As at 31 st March, 2026	As at 31 st March, 2025
	₹ / Lakhs	₹ / Lakhs
Net debt		
a. Borrowings		
- Non current	35,969	8,089
- Current (including current maturities of long-term debt)	10,781	12,139
	46,750	20,228
b. Cash and cash equivalents	76,743	23,085
c. Current investments	30,031	-
	1,06,774	23,085
Net debt/(Surplus)	(60,024)	(2,857)
Total equity	4,67,667	3,01,020
Net debt to equity ratio	(12.83%)	(0.95%)

In order to achieve this overall objective, the Group's capital management, amongst other things, aims to ensure that it meets financial covenants attached to the interest-bearing loans and borrowings that define capital structure requirements. There have been no breaches in the financial covenants of any interest-bearing loans and borrowing in the current period.

No changes were made in the objectives, policies or processes for managing capital during the years ended 31st March, 2026 and 31st March, 2025.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

52 EMPLOYEE STOCK OPTION PLAN

A. Dixon Technologies (India) Limited has laid down three stock option plans viz. Dixon Technologies (India) Limited – Employee Stock Option Plan, 2018 (“Dixon ESOP 2018”), Dixon Technologies (India) Limited – Employee Stock Option Plan, 2020 (“Dixon ESOP 2020”) and Dixon Technologies (India) Limited – Employees Stock Option Plan, 2023 (“Dixon ESOP 2023”), collectively known as “ESOP Plans”, which provides for the grant of Stock options convertible into equal number of equity shares of the Company to the eligible employees of the Company, Subsidiary Companies, Joint Venture Companies and Associate Companies, in accordance with the members approval accorded at the 25th Annual General Meeting, 27th Annual General Meeting and Postal Ballot dated 3rd December, 2023 of the Company, respectively. Pursuant to the said ESOP Plans, stock options have been granted to the employees of the Company, its subsidiaries, Joint Venture Companies.

Dixon ESOP 2018, Dixon ESOP 2020 and Dixon ESOP 2023 are implemented in terms of Securities and Exchange Board of India (Share Based Employee Benefits and Sweat Equity) Regulations, 2021 and the Company has not amended the plans during the financial year 2025-26.

All the ESOP plans are equity settled plans.

B. The Company has implemented an Employee Stock Option Plan (ESOP) for employees working in its Subsidiary and Joint venture Companies. These ESOPs are being offered at a discounted price. Furthermore, the Company intends to reclaim the ESOP discounts given to subsidiaries and Joint Venture's employees from the respective subsidiaries and joint venture companies.

C. Grant I, II, and III of the Dixon ESOP 2018 are fully exercised, and there are no outstanding shares available for exercise in this scheme.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

53 EMPLOYEE BENEFITS

a. Defined Contribution Plan

Provident Fund and Other Funds : A defined contribution plan is a post-employment benefit plan under which the Group pays specified contributions for provident fund and pension as per the provisions of the Provident Fund Act, 1952 and other acts to the government. The Group's contribution is recognised as an expense in the profit and loss statement during the year in which the employee renders the related service. The Group's obligation is limited to the amounts contributed by it.

Particulars	Year ended 31 st March, 2026	Year ended 31 st March, 2025
	₹ / Lakhs	₹ / Lakhs
Contribution to provident and other funds		
a. Contribution to provident fund	2,322	1,805
b. Contribution to employee state insurance	49	56
c. Contribution to national pension scheme	345	251
	2,716	2,112

b. Defined benefits plan

Gratuity: The Group provides gratuity benefits to its employees in accordance with the provisions of the Payment of Gratuity Act, 1972. The present value of obligation is determined based on actuarial valuation using the projected unit credit method.

(i) Principal Actuarial Assumptions

a. The assumptions of the Group as below:

Particulars	Year ended 31 st March, 2026	Year ended 31 st March, 2025
Future Salary Increase	7.00%	6.00%
Discount rate	7.70%	6.93%
Mortality rates	100% of IALM (2012-14)	100% of IALM (2012-14)
Attributes of ages: withdrawal rate (%)		
up to 30 years	3.00%	3.00%
From 31 to 44 years	2.00%	2.00%
Above 44 years	1.00%	1.00%
Retirement age (years)	58	58

b. The assumptions of one subsidiary company (Kunshan Q Tech Microelectronics (India) Private Limited as below:

Particulars	Year ended 31 st March, 2026	Year ended 31 st March, 2025
Future Salary Increase	5.00%	5.00%
Discount rate	7.54%	6.85%
Mortality rates	100% of IALM (2012-14)	100% of IALM (2012-14)
withdrawal rate (%)	6.00%	6.00%
Retirement age (years)	58	58

b. Impact of the change in salary increase		
Present value of obligation at the end of the period	3,115	2,800
Impact due to increase of 0.50%	170	145
Impact due to decrease of 0.50%	(157)	(134)

Notes:

- Sensitivities due to mortality and withdrawals are not material, hence impact of change not calculated.
- Sensitivities as to rate of inflation, rate of increase of pensions in payment, rate of increase of pensions before retirement and life expectancy are not applicable being a lump sum benefit on retirement.
- The above sensitivity analysis are without giving the impact of tax.

(x) Maturity profile of defined benefit obligation

Financial year	Amount
	₹ / Lakhs
Within 1 year	392
Between 1 to 5 years	437
Above 5 years	530
	1,359

Description of Risk Exposure:

Valuations are based on certain assumptions, which are dynamic in nature and vary over time. As such Group is exposed to various risks as follows:

- Salary Increases: Change in rate of future salary increase in subsequent years will result in higher liability.
- Discount Rate: Reduction in discount rate in subsequent valuations can increase the plan's liability.
- Mortality and disability – Actual deaths and disability cases proving lower or higher than assumed in the valuation can impact the liabilities.
- Withdrawals – Actual withdrawals proving higher or lower than assumed withdrawals and change of withdrawal rates in subsequent valuations can impact Plan's liability.

c. Liability for compensated absences is recognised on the basis of actuarial valuation as per Projected Unit Credit Method**Actuarial assumptions for compensated absences are as below:**

Particulars	Year ended 31 st March, 2026	Year ended 31 st March, 2025
i. Discounting rate	7.70%	6.93%
ii. Future increase salary	7.00%	6.00%

Particulars	Year ended 31 st March, 2026	Year ended 31 st March, 2025
i. Discounting rate	7.54%	6.85%
ii. Future increase salary	5.00%	5.00%

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

54 CORPORATE SOCIAL RESPONSIBILITY

As per section 135 of the Companies Act, 2013, a Group, meeting the applicability threshold, needs to spend at least 2% of average net profit of the immediately preceding three financial year on Corporate Social Responsibility ('CSR') activities. The focus areas for CSR activities identified are promoting education, skill development, art and culture, healthcare, welfare of senior citizens, environment sustainability, disaster relief and rural development projects. The CSR committee has been formed by the group as per the Act.

(i) The amount spent by the group on CSR activities are as below:

* During the previous year, Dixel Communications Private Limited wholly owned subsidiary of the Company has been struck off from the Register of Companies vide it's order dated 21st September, 2024.

** During the previous year, the group has completed the acquisition of 50.10% stake in Ismartu India Private Limited. Accordingly, Ismartu India Private Limited became a subsidiary of the Holding Company.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

57 COMPOSITION OF THE GROUP (Contd..)

*** On 26th September, 2025, the Holding Company completed the acquisition of 51% of the paid-up share capital of Kunshan Q Tech Microelectronics (India) Private Limited ("Q Tech India") on a fully diluted basis. Q Tech India became a subsidiary of the Holding Company with effect from 26th September, 2025.

**** During the year, Lightanium Technologies Private Limited (incorporated on 26th June, 2025) was established as a joint venture with Signify Innovations India Limited, with each party holding 50% of the post-issue share capital. The Holding Company transferred its lighting business undertaking, including the shares of Dixon Technologies Solutions Private Limited, to Lightanium for a total consideration of ₹ 14,030 Lakhs effective from 1st August, 2025. Consequently, Dixon Technologies Solutions Private Limited became a wholly-owned subsidiary of Lightanium Technologies Private Limited from 1st August, 2025.

C. Change in Group structure

- i. On 13th August, 2024, the Holding Company acquired 50.10% of the equity share capital of Ismartu India Private limited ("the Acquiree") for a total purchase consideration of ₹ 32,234 Lakhs. Pursuant to this acquisition, the Holding Company obtained control over the Acquiree as defined in Ind AS 110 – Consolidated Financial Statements, and accordingly the results of the Acquiree have been consolidated from the closing of business hours of 13th August, 2024.

ii. The effect of transaction on the accounts of the Group as at 13th August, 2024 is set out below:

Particulars	Amount ₹ / Lakhs
A Assets:	
Non-current assets	9,996
Current assets	1,19,625
Total assets	1,29,621
B Liabilities:	
Non-current liabilities	4,015
Current liabilities	96,043
Total liabilities	1,00,058
C Net asset value (A-B)	29,563
D Consideration	32,234
Goodwill (D-C) (see note i)	2,671

Note:-

- i. Goodwill represents excess of consideration paid over net of asset and liabilities recognised as on the completion date.

iii. During the financial year 2025-26, the Holding Company acquired the following business combinations:

- a. On 26th September, 2025, the Holding Company completed the acquisition of 51% of the paid-up share capital of Kunshan Q-Tech Microelectronics (India) Private Limited ("Q Tech India") for an aggregate consideration of ₹ 55,300 Lakhs (₹ 42,800 Lakhs cash consideration paid to existing shareholders and ₹ 12,500 Lakhs for subscription to fresh equity shares).

The effect of transaction on the accounts of the Group as at 26th September, 2025 is set out below:

Particulars	Amount ₹ / Lakhs
A Assets:	
Non-current assets	27,658
Current assets	37,392
Total assets	65,050

- 59 a)** Padget Electronics Private Limited (a subsidiary company) recognises incentive income under the Production Linked Incentive ("PLI") Scheme to the extent that its eligible revenues exceed the prescribed annual ceiling limit. Recognition of such incremental incentive income is permitted under the Scheme in circumstances where other eligible applicants within the same target segment have not fully utilised their respective ceiling entitlements. The recognition is based on management's assessment of the performance of other applicants, using publicly available information and internally available data.

Incentive income accrued amounting to ₹ 1,11,006 Lakhs, relating to such overperformance across different performance years, remains outstanding and receivable, pending formal determination and disbursement by the Project Management Agency ("PMA"). Correspondingly, the Company has recognised a liability payable to its customer as per the arrangement amounting to ₹ 72,634 Lakhs in respect of the same incentive.

The Subsidiary Company has consistently asserted its eligibility and entitlement to the aforesaid incentive through appropriate representations and continues to actively pursue their receipt for the relevant performance years through ongoing engagement with the PMA and other concerned authorities. Management's assessment regarding recognition and recoverability of the incentive receivable is supported by independent legal advice, which confirms the Company's eligibility for incentive upon achievement of the prescribed conditions under the Scheme.

- b)** Padget Electronics Private Limited (a subsidiary company) has been approved as an eligible applicant under the Hybrid Domestic Company category of the Production Linked Incentive (PLI) Scheme 2.0 for IT Hardware, notified vide Gazette Notification No. CG-DL-E-30052023-246165 dated 29th May, 2023. The initial approval

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

59 (Contd..)

was granted by IFCI Limited, the designated Project Management Agency, vide Letter No. IFCI/MeitY/PLI-ITHW-231124019 dated 24th November, 2023. Subsequently, based on the Company's request, the Project Management Agency revised the approval, shifting the Company's first year of performance from FY 2024-25 to 2025-26. The Company is accordingly eligible to receive incentives over a period of six years from FY 2025-26 to 2030-31, subject to fulfilment of prescribed investment and incremental revenue thresholds in each performance year. During the year ended 31st March, 2026, being the first performance year under the Scheme, the Company has met the requisite incremental investment and revenue thresholds. Accordingly, incentive income has been recognised in the financial statements. The formal claim for the said incentive is yet to be filed with the Project Management Agency.

c) Production Linked Incentive (PLI) Scheme to promote Telecom And Networking Products Manufacturing in India:

The Ministry of Communications issued a gazette Notification No. CG-DL-E-24022021-225442 on 24th February, 2021 to introduce a Production Linked Incentive Scheme (PLI) to encourage the manufacturing of Telecom and Networking products in India. Dixon Electro Appliances Private Limited ("The Company") applied for the scheme on 2nd July, 2021 and received approval on 14th October, 2021. The scheme was applicable for the financial year 2021-22 to financial year 2026-27, and the Company was eligible to receive a certain percentage of sales of eligible products as incentives during this period.

In financial year 2022-23, the scheme was revised through an office memorandum dated 20th June, 2022 to introduce a design-led criterion. An additional incentive of 1% was offered, and the Company reapplied for the scheme on 25th August, 2022. The Company was granted approval on 31st October, 2022 and opted to forego the benefit available under its former application. The revised scheme is applicable from financial year 2022-23 to financial year 2026-27.

The Company has met the investment and revenue thresholds for financial year 2025-26 of ₹ 18,000 Lakhs and ₹ 360,000 Lakhs respectively, and is eligible to claim the incentive from the government under the aforesaid scheme. Accordingly, the Company has accrued the PLI incentive as a grant in the nature of income in accordance with Ind AS 20 – "Government Grants" and recognised an amount of ₹ 5,820 Lakhs (net of benefits transferred to customers) under other operating revenue against the gross incentive amount of ₹ 18,000 Lakhs, out of which ₹ 2,700 Lakhs (gross amount less incentive received during the year) has been shown as amount receivable from government authorities under other current financial assets.

During the current year, the Company has received the incentive accrued during the year ended 31st March, 2025 and 85% of the incentive accrued for the year ended 31st March, 2026."

d) The Uttar Pradesh Electronics Manufacturing Policy, 2020:

The Uttar Pradesh Electronics Manufacturing Policy, 2020, notified by the Government of Uttar Pradesh on 7th February, 2020, provides various fiscal and non-fiscal incentives to eligible units engaged in setting up or expanding electronics manufacturing operations in the state of Uttar Pradesh. The Group operates multiple manufacturing units in the state of Uttar Pradesh. During the year, the Group has received approval for disbursement of capital and revenue incentives for its manufacturing units situated in Noida, Uttar Pradesh, to be disbursed in six installments. Capital incentives are recognised as deferred income and released to the Statement of Profit and Loss over the useful life of the underlying assets. When there is reasonable assurance, revenue incentives are recognised in the Statement of Profit and Loss.

e) Dixon Display Technologies Private Limited (a subsidiary company) has received approval for manufacturing of Display Module Sub-Assembly under the Electronics Component Manufacturing Scheme (ECMS) notified by the Ministry of Electronics and Information Technology (MeitY) vide Gazette Notification No. CG-

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

59 (Contd..)

DL-E-08042025-262341 dated 8th April, 2025, vide approval letter dated 30th March, 2026 issued by Engineers India Limited acting as Project Management Agency appointed by MeitY. The subsidiary company needs to meet the minimum threshold requirements for revenue, investment and employment and also adhere to the minimum sub-assembly process requirements as mentioned in the scheme guidelines from financial year 2026-27 to financial year 2031-32.

- 60** The Group has been sanctioned working capital limits in excess of ₹ 500 Lakhs in aggregate from Banks/financial institutions on the basis of security of current assets. There were no material differences between the books of accounts and Quarterly returns / statements filed with such Banks/ financial institutions for financial year 2025-26.
- 61** The Board of Directors of the Holding Company have recommended a final dividend of 500% (₹ 10 per Equity Share of face value ₹ 2 each) for the financial year 2025-26 subject to the approval of the shareholders in the ensuing Annual General Meeting of the Company.
- 62** In the previous year, the Holding Company entered into Share Subscription and Purchase Agreement ("SSPA") with Aditya Infotech Limited ("Aditya") for sale of 9,500,000 fully paid-up equity shares of AIL Dixon Technologies Private Limited ('AIL Dixon') representing 50% of AIL Dixon equity share capital, the joint venture company. The consideration of this transaction is through exchange of 73,05,805 equity shares of ₹ 1 each, representing 6.50% of Aditya equity share capital on a fully diluted basis on that date. The fair value gain of ₹ 45,998 lakhs on these investments has been recognised during the year ended 31st March, 2025, which has been disclosed as an exceptional item in the previous year.
- 63** The Government of India has consolidated 29 existing labour legislations into a united framework comprising four Labour Code viz Code on Wages 2019, Code on Social Security 2020, Industrial Relation Code 2020, and Occupational Safety, Health and Working Condition Code 2020 (collectively referred to as the "New Labour Codes"). These New Labour Codes have been made effective from 21st November, 2025. Subsequent to the year-end, the Central Government has notified the Industrial Relations (Central) Rules, 2026, the Code on Wages (Central) Rules, 2026, the Code on Social Security (Central) Rules, 2026, and the Occupational Safety, Health and Working Conditions (Central) Rules, 2026. The corresponding State Rules and certain other operational clarifications under the New Labour Codes are yet to be notified. The Group has assessed and accounted for the incremental liability towards its employees in the year ended 31st March, 2026. The impact of such adjustment is not material to the consolidated financial statements for the year ended 31st March, 2026. The Group will continue to monitor the notification of the remaining State Rules and clarifications, and will evaluate and give effect to the impact, if any, on the measurement of employee benefit obligations in the period in which such Rules become effective.
- 64** On 25th April, 2025, Ismartu India Private Limited (a subsidiary company) has entered into an Asset Purchase Agreement (APA) with KHY Electronic India Private Limited, to acquire fixed assets of KHY Electronics India Private Limited.

Accounting and disclosures on Business Combinations as per Ind AS 103

Pursuant to APA entered with KHY Electronic India Private Limited, with effect from 25th September, 2025 ("Acquisition Date"), the Subsidiary Company has acquired fixed assets for a cash consideration of ₹ 12,100 Lakhs. On the acquisition date, all the assets acquired are accounted at fair value in accordance with Ind AS 103 on "Business Combinations".

Assets acquisition is expected to drive growth in OEM orders, facilitate market expansion, and strengthen the strategic positioning of the Company.

NOTES FORMING PART OF THE CONSOLIDATED FINANCIAL STATEMENTS (Contd.)

64 (Contd..)
